

Contact Tracing Service Management Information Update

Issued 18 February 2021

Contact tracing is an important part of the Covid-19 Test, Trace and Protect Strategy¹ in Northern Ireland. Contact tracing involves identifying people who have been in close contact with cases of Covid-19, informing them of this, and providing them with information on the symptoms to be aware of, what to do if symptoms develop and if they need to self-isolate or get tested.

Current data

Weekly data

Data as of Sunday 14 February @ 12 midnight	In 7 days up to 14 February 2021
Number of positive cases transferred to the contact tracing system ²	2128
Number of positive cases where contact tracing completed	2009
Total number of positive cases where contact tracing not completed	119
<ul style="list-style-type: none">Number of incomplete cases sent an SMS advising self-isolation and inviting to digitally self-traceNumber of incomplete cases telephoned at least once	84 97
Number of contacts identified ³	5058
Number of contacts reached	4997
Number of contacts not reached	61

² CTS aims to deduct duplicates and cases where no contact details are available. Care home residents who test positive are followed up under separate health protection arrangements and are not included in this information.

³ This does not include staff and patient contacts in a hospital/Trust setting, as these are managed by the relevant Health and Social Care trust.

Number of cases – past 4 weeks

Number of contacts – past 4 weeks

Case completion by time period

Of the 2,128 positive cases reported to the contact tracing service between 8 February 2021 and 14 February 2021, 90% were reached within 24 hours and 94% were reached within 48 hours.

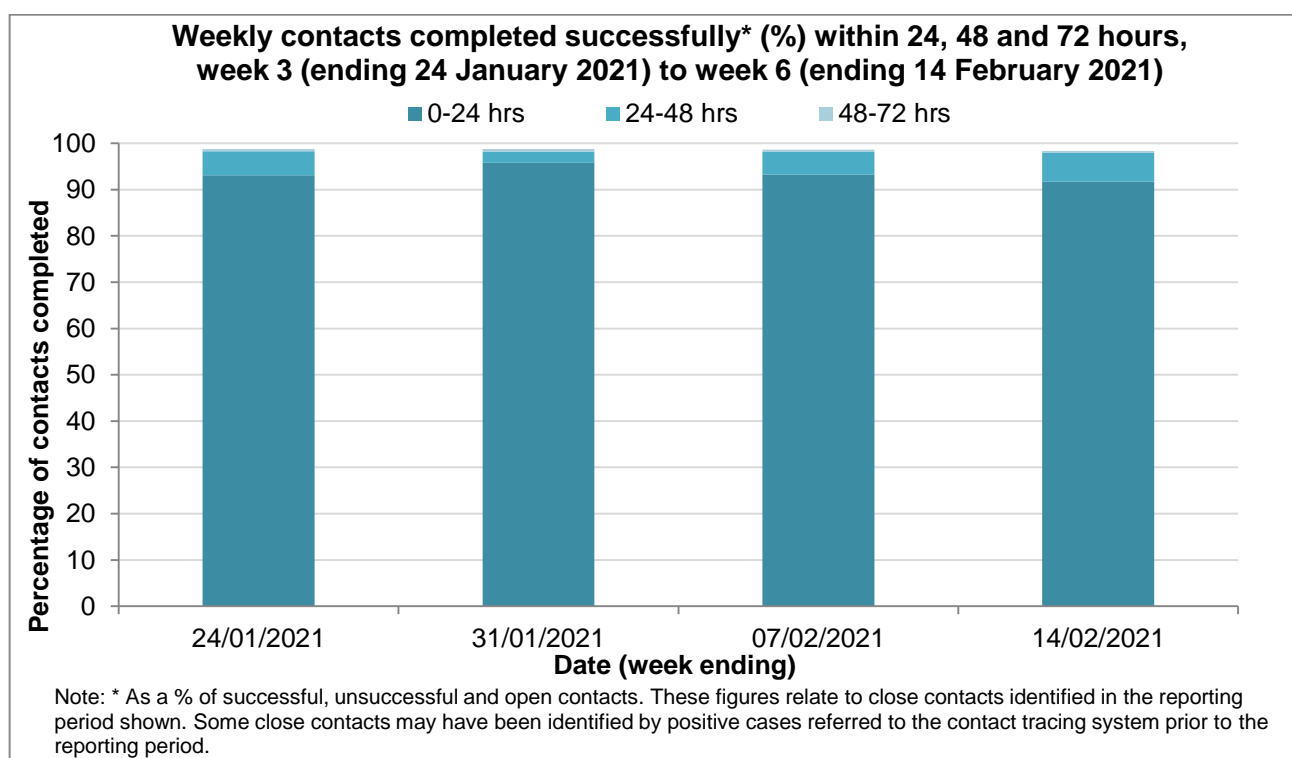

Weekly – past 4 weeks

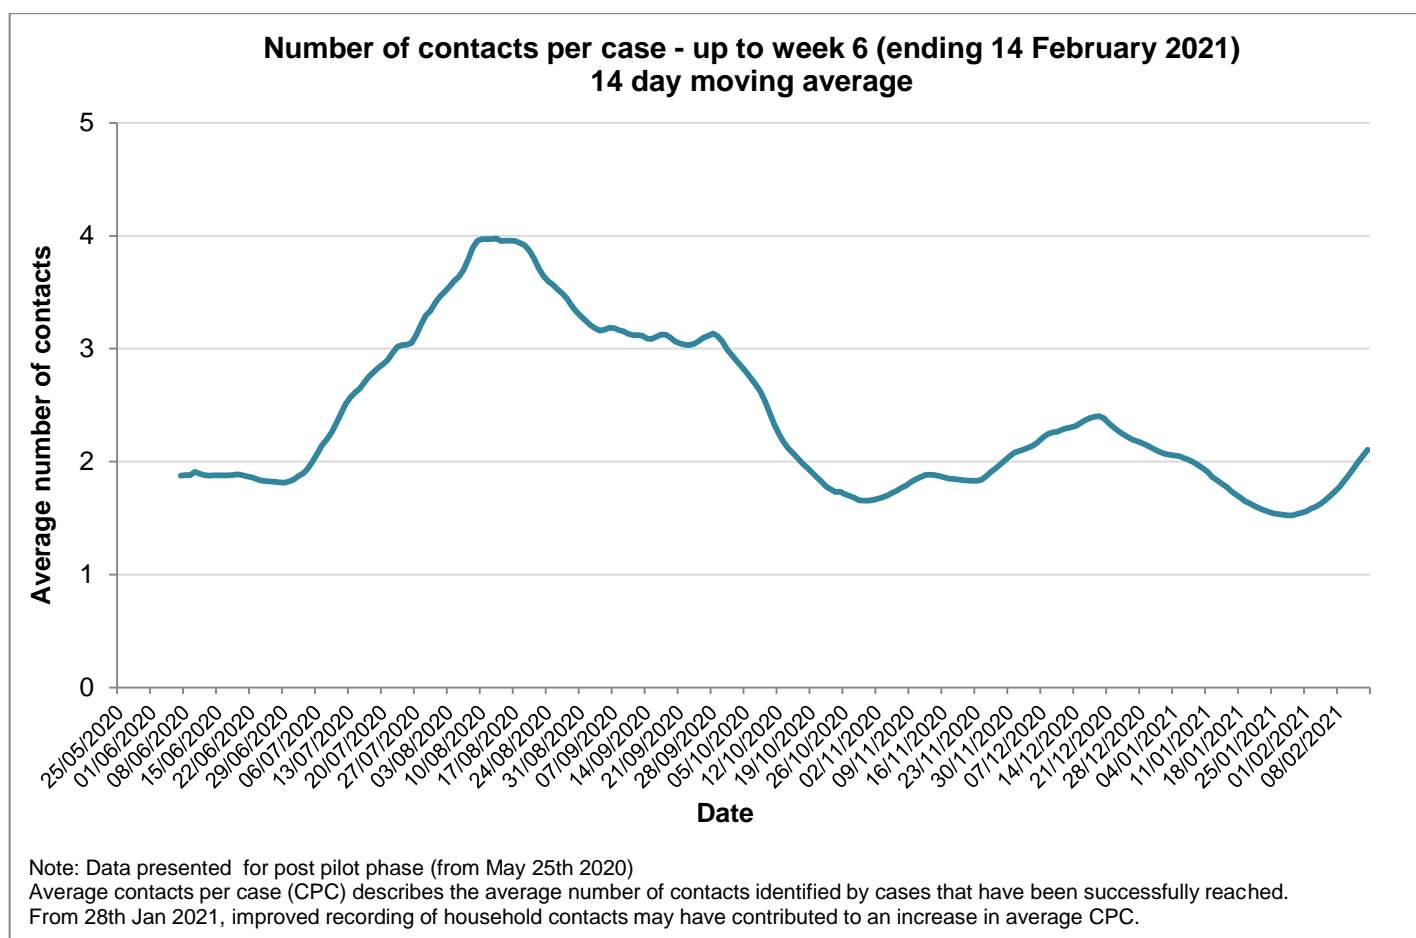

Contact completion by time period

Of the 5,058 contacts identified by the contact tracing service between 8 February 2021 and 14 February 2021, 92% were reached within 24 hours of the positive case that identified them being referred to the CTC, with 98% reached within 48 hours.

Weekly – past 4 weeks

Number of contacts per case

Notes:

- Data extracted from contact tracing system at 10am on Wednesday 17th February 2021.
- SMS sent to contacts from 30th September 2020.
- Digital Self Trace for cases commenced on 9th October 2020.
- These data are management information collected from a live operational system and provide a summary of contact tracer activity.
- Reporting methods and parameters may change over time.
- Should not be compared with other published figures as they will not align.
- New IT systems and data outputs often take some time to bed in. Data should therefore be treated with caution while the system and understanding of the data develops. At this stage, there is a risk of data entry errors or delay, which may require that data are revised and updated in future. The process of finding and removing duplicate records may also need refining, which could result in revisions to the data.
