

Contact Tracing Service Management Information Update

Issued 18 June 2020

	CTS activity in 7 days to Wednesday 17/6/20 @5pm
Number of positive tests reported to the Contact Tracing Service (CTS)	105
Number of positive cases transferred to the contact tracing system¹	68
Number of positive cases that have completed contact tracing	53
Number of contacts identified²	88
Number of contacts successfully contacted and advised	83

¹The number of positive tests reported is not the same as the number of cases added as the CTS aims to deduct duplicates and cases where no contact details are available. Care home residents who test positive are followed up under separate health protection arrangements and are not included in this information.

²This does not include staff and patient contacts in a hospital/Trust setting, as these are managed by the relevant Health and Social Care Trust.

Notes:

- This data provides a snapshot of contact tracer activity in a live operational system which includes case and contact activity in progress or in a queue.
- Reporting methods and parameters may change over time.
- This data should not be compared with other published figures as they will not necessarily align.
