FOOTNOTES: The Stillbirth (Definition) Act 1992 redefined a stillbirth, from 1 October 1992, as a child which had issued forth from its mother after the 24th week of pregnancy and which did not breathe or show any other sign of life. Prior to 1 October 1992 the statistics related to events occurring after the 28th week of pregnancy. Figures do not include births to women living outside Northern Ireland
 Birth rate is calculated using total population figure
Birth rates have been updated following the release of new population estimates for the years 2001-2011 in light of the 2011 Census

FOOTNOTES: Age-specific fertility rate is the number of live births occurring to a particular woman of a particular age or age group per year, normally expressed per 1,000 women
 Total Period Fertility Rate (TPFR) is the average number of children that would be born to a cohort of women who experienced throughout their childbearing years the fertility rates of the calendar year in question.
Birth rates have been updated following the release of new population estimates for the years 2001-2011 in light of the 2011 Census

The Stillbirth (Definition) Act 1992 redefined a stillbirth, from 1 October 1992, as a child which had issued forth from its mother after the 24th week of pregnancy and which did not breathe or show any other sign of life. Prior to 1 October 1992 the statistics related to events occurring after the 28th week of pregnancy.

In the UK, when reporting deaths from suicide, it is conventional to include cases where the cause of death is classified as either 'Intentional self-harm' or 'Event of undetermined intent'. The latter are included in Other causes above consistently with previous reports. In 2013 there were 43 male and 17 female such deaths recorded. If these are included, the total suicide and undetermined intents are 229 male and 74 females respectively. More detailed breakdowns can be obtained from <http://www.nisra.gov.uk/demography/default.asp14.htm>

Potential Years of Life Lost (PYLL) is a measure of premature death, measured as the number of years of life 'lost' from a death when a person dies before the age of 75. A death at age 25, for example, has lost 50 potential years of life. Infant deaths under 1 years are omitted as they are mostly a result of causes specific to this age group and have different aetiologies to deaths later in life.
