

Epidemiology of tuberculosis in Northern Ireland: Annual surveillance report 2007

This report provides an annual update on the prevalence of tuberculosis in Northern Ireland. It gives a general overview of TB rates and statistics, and looks at both pulmonary and non-pulmonary tuberculosis cases in detail, examining the forms of therapy employed and highlighting any drug resistance. The report also includes a discussion, which considers the specifics of newly diagnosed cases (age, place of birth) and provides some comparative data for the UK and Republic of Ireland.
