[Health Protection](#)

This edition of *Transmit* features a full update from two of the PHA's health protection teams: the gastrointestinal, waterborne disease and zoonoses team, and the respiratory infections team. Food poisoning trends and statistics are provided, alongside an overview of other gastrointestinal infections in 2009, including those acquired abroad. The respiratory team's update gives a summary of tuberculosis (TB) in Northern Ireland in 2008 and provides provisional data for 2009. It also includes statistics for the first two quarters of 2010 on respiratory viruses, respiratory bacteria and mycobacteria. Other health protection issues covered in this issue include immunisation for children who are immigrants and an update on PVL *Staphylococcus aureus*.
