

# Why children die: A pilot study 2006

## This is then

first report of a national confidential enquiry specifically focussed on child deaths. Confidential enquiries have already contributed to major improvements in obstetrics, neonatal, and perioperative care in the United Kingdom (UK). However they are time consuming and require extensive collaboration between various professional groups as well as the attention of a dedicated full-time research team. Hence, when planning a confidential enquiry in a new patient group, it is pertinent to investigate both feasibility and utility at its outset. Significant contribution to child health in the UK.
