## Rotavirus

### Factsheet for parents

This factsheet describes the rotavirus infection and the vaccine that protects against it. It also provides the background to the development and introduction of the vaccination programme.

This factsheet provides information for parents on the rotavirus vaccine given to babies at two and three months old. This is more detailed than the information contained in the leaflet Immunisation for babies up to a year old.

**This factsheet is currently being updated according to the new childhood immunisation schedule 2025 and will be available here soon.**

## Details
