

Northern Ireland offers a comprehensive vaccination programme, **free for eligible individuals** based on age or risk group, to protect against serious diseases. **Learn about [vaccines](#) and access information on [immunisation and vaccinations programmes on nidirect page](#)** in addition to the PHA resources for Northern Ireland.

Vaccination programmes offered in Northern Ireland

The [Department of Health](#) selects vaccination programmes based on expert advice, and delivery involves collaboration between healthcare providers, public health experts, and other organisations. These include government departments, public health experts, academic researchers, commissioners, pharmacists, school health teams, health visitors and GPs.

Programme types:

- Universal - offered to everyone (e.g., school-based programmes)
- Targeted - for those at higher risk (e.g., pregnancy, or elderly programmes)

Key programme: Influenza (flu)

The [Influenza \(flu\) vaccine programme](#) is the largest, most comprehensive programme, running from October to March for:

- Children
- Adults
- Health and social care workers

Vaccination programmes advice and schedules:

[January 2026 \(Phase 2\) - Changes to childhood immunisation schedule \(under review\)](#)

Effective 1 January 2026, childhood immunisation schedule changes with the introduction of the MMRV vaccine (measles,

mumps, rubella, varicella/chickenpox), replacing the MMR vaccine for most routine doses [**Read more about Measles - don't let your child catch it - get the MMRV vaccine.**](#)

Childhood immunisations by age

- [Childhood immunisation programme leaflets from January 2026](#)

Protecting children from an early age is vital to their health.

Age group	Vaccine
	Vaccines in this age provide protection against diseases such as Diphtheria, tetanus, pertussis, polio, hepatitis B, Hib, MMRV, Men B, Men C, pneumococcal, rotavirus, BCG, influenza.
Babies up to 12 months	<ul style="list-style-type: none">• <u>Immunisation: for premature babies</u>• <u>Immunisation for babies: up to a year old</u>• <u>Changes to the infant pneumococcal conjugate vaccine schedule - Information for healthcare practitioners</u>• <u>Rotavirus factsheet for parents (Immunisation)</u>• <u>Measles - don't let your child catch it - get the MMRV vaccine</u>
Babies just after their 1st birthday:	<ul style="list-style-type: none">• <u>Immunisation: for babies just after their first birthday</u>• <u>Measles - don't let your child catch it - get the MMRV vaccine</u>
Children aged 18 months:	<ul style="list-style-type: none">• <u>Immunisation: for children aged 18 months</u>• <u>Measles - don't let your child catch it - get the MMRV vaccine</u>

Age group	Vaccine
Preschool children (aged 3 years and 4 months old):	<ul style="list-style-type: none"> Children in this age group should receive booster vaccines to strengthen their immunity against serious illnesses such as diphtheria, tetanus, pertussis, polio, MMR. <ul style="list-style-type: none"> Immunisation: for pre-school children Childhood immunisation programme leaflets from January 2026 Measles, mumps, rubella and varicella (MMRV) vaccine nidirect
12-13 years old:	<ul style="list-style-type: none"> Children in this age group should receive booster vaccines for diphtheria, tetanus, pertussis, polio, MenACWY, MMR, and get started on HPV. <ul style="list-style-type: none"> Help protect yourself: The essential guide to the HPV vaccination for all young people aged 12 to 13 and translations
14-18 years old:	<ul style="list-style-type: none"> These include boosters and additional vaccines to maintain long-term immunity. <ul style="list-style-type: none"> Teenage immunisations for ages 14 to 18 (English and translations) Meningococcal ACWY programme for adolescents
18-25 years old:	<ul style="list-style-type: none"> First-time university attendees are encouraged to ensure they are fully vaccinated, including protection against meningitis. <ul style="list-style-type: none"> Those attending university for the first time

Childhood immunisation schedule (parental guidance)

Age due	Vaccines that protect against	Vaccine given
8 weeks old	Diphtheria, tetanus, pertussis (whooping cough), polio, Haemophilus influenzae type b (Hib) and hepatitis B	DTaP/IPV/Hib/He (6 in 1 vaccine) - one injection
	Meningococcal group B (MenB)	MenB - one injection
	Rotavirus gastroenteritis	Rotavirus - orally
12 weeks old	Diphtheria, tetanus, pertussis (whooping cough), polio, Haemophilus influenzae type b (Hib) and hepatitis B	DTaP/IPV/Hib/He (6 in 1 vaccine) - one injection
	Meningococcal group B (MenB)	MenB - one injection
	Rotavirus gastroenteritis	Rotavirus - orally
16 weeks old	Diphtheria, tetanus, pertussis (whooping cough), polio, Haemophilus influenzae type b (Hib) and hepatitis B	DTaP/IPV/Hib/He (6 in 1 vaccine) - one injection
	Pneumococcal (13 serotypes) • if received pneumococcal at 12 weeks give Men B	PCV - one injection
Age due	Vaccines that protect against	Vaccine given
One year old (on or after the child's first birthday)	Born before 1 July 2024	Born on or after 1 July 2024
	Pneumococcal	Pneumococcal
	Measles, mumps, rubella	Measles, mumps, rubella
		PCV - one injection
		MMR - one injection

	MenB	MenB	MenB - one injection
	Hib/MenC (if Hib/MenC exhausted give DTaP/Hib/IPV/HepB)		Hib/MenC - one injection
18 months	No appointment	DTaP/IPV/Hib/HepB Measles, mumps, rubella	DTaP/IPV/Hib/HepB - one injection MMR - one injection
3 years 4 months old or soon after	Diphtheria, tetanus, pertussis and polio	Diphtheria, tetanus, pertussis and polio	dTaP/IPV - one injection
	Measles, mumps, rubella		MMR - one injection
Boys and girls aged 12 to 13 years	Cancers and genital warts caused by specific human papillomavirus (HPV) types		HPV - one injection
14 years old (school Year 9)	Tetanus, diphtheria and polio		Td/IPV - one injection
	Meningococcal groups A, C, W and Y		MenACWY - one injection
Eligible paediatric age group See annual flu letter	Influenza (each year from September)		LAI (Live attenuated influenza vaccine • If LAI is contraindicated or otherwise unsuitable use inactivated flu vaccine (check Green Book chapter 19 for details) - injection or nasal spray

Selective childhood immunisation programmes

Target group	Age and schedule	Disease	Vaccines required
Babies born to mothers with hepatitis B	At birth, 4 weeks if born before 1 July 2024 give additional dose at one year	Hepatitis B	Hepatitis B (Engerix B/HBvaxPRO)
Infants in areas of the country with TB incidence >= 40/100,000	Around 28 days old	Tuberculosis screening outcome before giving BCG	BCG Check SCID
Infants with a parent or grandparent born in a high incidence country	Around 28 days old	Tuberculosis screening outcome before giving BCG	BCG Check SCID
Children in a clinical risk group	<p>Age under 2 years • if first ever flu vaccine give second dose at 4 weeks</p> <p>Aged 2 to 8 years • if first ever flu vaccine give second dose at 4 weeks</p> <p>Aged 9 to 17 years • only one dose required each flu season</p> <p>At any stage of pregnancy during flu season</p>	Influenza	<p>Inactivated flu vaccine</p> <p>LAIIV • if LAIV contraindicated or otherwise unsuitable give inactivated flu</p> <p>LAIIV • if LAIV contraindicated or otherwise unsuitable give inactivated flu</p>
Pregnant women	<p>From 16 weeks gestation</p> <p>From 28 weeks gestation</p>	Pertussis RSV	<p>Inactivated flu vaccine</p> <p>Tdap (ADACEL)</p> <p>RSV vaccine (Abrysvo)</p>

[July 2025 \(Phase 1\) - Changes to childhood immunisation schedule](#)

Effective 1 July 2025, the childhood immunisation (vaccination) schedule in Northern Ireland was updated.

This offers children even better protection against infectious diseases such as measles and meningitis.

Vaccination during pregnancy and recommended schedule

Vaccination during pregnancy helps protect both mother and baby.

Vaccination during pregnancy can help prevent disease or make illness less serious for you, and for your baby. This is because the antibodies (natural substances your body produces to fight infection) are passed to your unborn baby, helping to protect them in their first few weeks of life.

Pregnancy webinars

- [Vaccinations during pregnancy \(pptx slides from webinar\) - 25 October 2024](#)

Recommended schedule:

Vaccine	When to have the vaccine
Whooping Cough (Pertussis) immunisation	Offered from 16 weeks. The best time to have the whooping cough vaccine is from 16 to 32 weeks of pregnancy. You can have it up until your baby is born, but it may be less effective later in pregnancy.
How to protect your baby from RSV	Offered from 28 weeks. The best time to have the RSV vaccine is from 28 to 36 weeks of pregnancy. You can have it up until your baby is born, but it may be less effective later in pregnancy.
Influenza (flu) vaccine	Offered during flu season (which may be at any time during your pregnancy). You should have the flu vaccine as soon as it is offered to you.

Vaccination for older adults (aged 65 years and over)

Different immunisations are available for adults aged 65 years and over.

Vaccinations play crucial role in protecting older adults from age-related health risks.
