

Director of Public Health Core Tables 2023

The Director of Public Health Core Tables contain a range of demographic information such as home population figures and projections, births and fertility data, death rates, childhood immunisation rates, infectious diseases and population screening uptake rates.

These tables were originally produced by the Public Health Agency as a means of collating a series of information about the health of the population. Over time this data has become available directly from PHA and NISRA websites and the PHA is considering ceasing to publish these Tables as a separate document. As these are Official Statistics we need to formally consult on any major changes and we are keen to hear back from users about the impact this might have, and any steps we can take to make it easier to find the data, if we cease to publish it separately.
