Circulating strains this season to date

- Flu AH3: 2%
- Flu A(H1N1) 2009: 6%
- Flu A (Untyped): 1%
- Flu B: 91%

Number of hospital cases with confirmed flu (9 Dec – 15 Dec 2019)

- Flu AH3
- Flu A(H1N1) 2009
- Flu A (Untyped)
- Flu B
- All flu tests

- 0-4
- 5-14
- 15-44
- 45-64
- 65+
- All ages

To date there have been 36 admissions to ICU with confirmed influenza

Respiratory Outbreaks this Week (9 Dec – 15 Dec 2019)

- 2

To date there have been six flu outbreaks; five in a Care Home setting and one in a Hospital setting

Vaccine Uptake (1 October - 30 November 2019)

- 29.9% All 2 to 4 year olds*
- 75.6% Primary school children offered and vaccinated so far*
- 43.8% All pregnant women
- 43.8% All individuals under 65 years with a chronic medical condition
- 62.5% All individuals 65 years and over
- 37.3% Frontline health care workers employed by a Trust
- 19.8% Frontline social care workers employed by a Trust

* 2-4 year old programme started mid to late October 2019, primary school programme stopped for 2 weeks in November
GP consultation rates for ‘flu/flu-like-illness’ (‘flu/FLI’)
Figure 2. Northern Ireland Out of Hours (OOH) consultation rates for ‘flu/FLI’ 2018/19 – 2019/20

Comment

The flu/FLI consultation rate in Primary Care Out-of-Hours (OOH) Centres during week 50 was 11.0 per 100,000 population, a decrease from week 49, 2019 (19.3 per 100,000). This is higher than the same time last year (5.7 per 100,000).

In week 50 the percentage of calls to an OOH Centre due to flu/FLI was 1.9%. This is a decrease from week 49 (3.1%) but is higher than the same period last year (0.9%).

Consultation rates decreased in week 50 compared to week 49 in all age groups, but remained the same in those aged 45-64 years old (8.5 per 100,000). Consultation rates were highest in those aged 0-4 years in week 50 (28.0 per 100,000 population). Rates are higher in all age groups compared to the same period last year (week 50, 2018-19).
Virology

Figure 3. Weekly number of flu laboratory reports from week 40, 2018 with weekly GP consultation rates for ‘flu/FLI’
Influenza Weekly Surveillance Bulletin

Week 50 (9 Dec – 15 Dec 2019)

Note

Additional virology testing has been undertaken at local laboratories. This bulletin includes this data along with the data from the Regional Virology Laboratory.

All virology data are provisional. The virology figures for previous weeks included in this or future bulletins are updated with data from laboratory returns received after the production of the last bulletin. The current bulletin reflects the most up-to-date information available. Sentinel and non-sentinel samples are tested for influenza and for RSV. Cumulative reports of influenza A (untyped) may vary from week to week as these may be subsequently typed in later reports.
Figure 4. Number of samples tested for influenza and proportion positive, 2018/19 – 2019/20, all sources

Comment

In week 50, 367 samples were positive for flu (333 Flu A(H3), six Flu A(H1N1), 23 Flu A(untyped) and five Flu B) from 840 submitted for testing in laboratories across Northern Ireland.

Positivity decreased in week 50 (44%) compared to week 49 (48%). Positivity is higher than this time last year (8%).

20 of the 26 samples submitted by the GP based sentinel scheme were positive for flu (16 Flu A(H3), one Flu A(H1N1), two Flu A(untyped) and one Flu B; 77% positivity) (Figures 3 and 4; Tables 1, 2 and 3).
Respiratory Syncytial Virus (RSV)

Figure 5. Number of samples tested for RSV and proportion positive, 2018/19 – 2019/20, all sources

Comment

In week 50, 76 samples were positive for RSV, with positivity (10%) lower than the same period last season (15%).

The majority (64%) of cases since week 40 have occurred in children aged 0-4 years (Table 2 and Figure 5).
Hospital Surveillance (Non-ICU/HDU)

Figure 6. Weekly number of hospitalisations testing positive for influenza by week of specimen, 2018/19 – 2019/20

Comment

In week 50, 291 hospitalisations tested positive for flu (242 Flu A(H3), three Flu A(H1N1), 42 Flu A(untyped) and four Flu B). This is an increase compared to the same time last year (Figure 6).

Of note, not all positive specimens may have been reported as this point.
ICU/HDU Surveillance

![Graph showing confirmed ICU/HDU influenza cases by week of specimen, 2018/19 – 2019/20](image)

**Figure 7.** Confirmed ICU/HDU influenza cases by week of specimen, 2018/19 – 2019/20

**Comment**

Data are collected on laboratory confirmed influenza patients and deaths in critical care (level 2 and level 3). There were four new admissions to ICU with confirmed influenza reported to the Public Health Agency (PHA) during week 50. So far this season there has been 36 admissions to ICU with confirmed influenza (23 Flu A(H3), three Flu A(H1N1), nine Flu A(untyped) and one Flu A&B) reported to the PHA (Figure 7).

Of the 36 admissions to ICU, 53% (n=19) were male. The ages ranged from <1 year to 86 years, with a median age of 52 years and a mean age of 47 years. 75% (n=27) were classed as being in a vaccine risk group, of which vaccination status was known for 81% (n=22); 5 were vaccinated this season.
Outbreaks

During week 50 there were two confirmed respiratory outbreaks reported to the PHA Health Protection acute response duty room; both in a Care Home setting (both Flu A(untyped)). To date, there has been a total of six confirmed respiratory outbreaks reported, five in a Care Home setting and one in a Hospital setting (all Flu A(untyped)).

Mortality

The Northern Ireland Statistics and Research Agency (NISRA) provide the weekly number of respiratory associated deaths and its proportion of all-cause registered deaths.

Respiratory associated deaths include those that are attributable to influenza, other respiratory infections or their complications. This includes “bronchiolitis, bronchitis, influenza or pneumonia” keywords recorded on the death certificate.

Figure 8. Weekly registered deaths and proportion of all deaths with keywords, by week of registration from week 40, 2018
Comment

In week 50, 97 respiratory associated deaths out of 353 all-cause deaths were reported (27%). These trends are broadly the same as the same period in 2018/19 (Figure 8).

EuroMOMO

There was no excess all-cause mortality reported in Northern Ireland in week 50. Excess all-cause mortality was reported for one week in Northern Ireland to date this season (week 48).

Please note this data is provisional due to the time delay in registration; numbers may vary from week to week.

Information on mortality from all causes is provided for management purpose from Public Health England. Excess mortality is defined as a statistically significant increase in the number of deaths reported over the expected number for a given point in time. This calculation allows for a weekly variation in the number of deaths registered and takes account of deaths registered retrospectively. Information is used to provide an early warning to the health service of any seasonal increases in mortality to allow further investigation of excess detections.

There is no single cause of ‘additional’ deaths in the winter months but they are often attributed in part to cold weather (e.g. directly from falls, fractures, road traffic accidents), through worsening of chronic medical conditions e.g. heart and respiratory complaints and through respiratory infections including influenza.

For more information on EuroMOMO and interactive maps of reporting across the season please see [http://www.euromomo.eu/index.html](http://www.euromomo.eu/index.html)
Influenza Vaccine Uptake

Every year the seasonal flu vaccine programme officially commences on 1\textsuperscript{st} October and is delivered by primary care, the Trust school nursing service (in school) and the Trust health and social care worker (HSCW) flu campaign. This year, the children’s programme has been impacted on by temporary delays in the manufacturing of the flu vaccine given to children (see table 4 for details).

Uptake for primary school children is presented differently and is the proportion of children offered the vaccine between the start of the programme and 30\textsuperscript{th} November and also received it.

USA (CDC): Weekly U.S. Influenza Surveillance Report
Acknowledgements

We would like to extend our thanks to all those who assist us in the surveillance of influenza in particular the sentinel GPs, Out-of-Hours Centres, Apollo Medical, Regional Virus Laboratory, Critical Care Network for Northern Ireland and Public Health England. Their work is greatly appreciated and their support vital in the production of this bulletin. The author also acknowledges the Northern Ireland Statistics and Research Agency (NISRA) and the General Register Office Northern Ireland (GRONI) for the supply of data used in this publication. NISRA and GRONI do not accept responsibility for any alteration or manipulation of data once it has been provided.

For further information on the Enhanced Surveillance of Influenza in Northern Ireland scheme or to be added to the circulation list for this bulletin please contact:
