

# Contact Tracing Service

## Management Information Update

**Issued 12 June 2020**

	<b>CTS activity in 7 days to Wednesday 10/6/20 @5pm</b>
<b>Number of positive tests reported to the Contact Tracing Service (CTS)</b>	<b>166</b>
<b>Number of positive cases transferred to the contact tracing system<sup>1</sup></b>	<b>101</b>
<b>Number of positive cases that have completed contact tracing</b>	<b>81</b>
<b>Number of contacts identified<sup>2</sup></b>	<b>167</b>
<b>Number of contacts successfully contacted and advised</b>	<b>146</b>

<sup>1</sup>The number of positive tests reported is not the same as the number of cases added as the CTS aims to deduct duplicates and cases where no contact details are available. Care home residents who test positive are followed up under separate health protection arrangements and are not included in this information.

<sup>2</sup>This does not include staff and patient contacts in a hospital/Trust setting, as these are managed by the relevant Health and Social Care Trust.

### Notes:

- This data provides a snapshot of contact tracer activity in a live operational system which includes case and contact activity in progress or in a queue.
- Reporting methods and parameters may change over time.
- This data should not be compared with other published figures as they will not necessarily align.
