

## COVID-19 Frequently Asked Questions (FAQs) for Maritime Sector

V8.0 15<sup>th</sup> July 2020

The following are a set of FAQs which further interpret Government guidance on Covid-19 for the maritime sector.

### Summary of principles;

- Recent experience has shown that it is not possible to self-isolate on ships without the risk of continuing transmission
- PHE advice is to get people off ships wherever possible if Covid-19 is suspected.
- The same guidance applies as on shore; seriously ill people go to hospital, mildly ill and contacts self-isolate ashore.
- For cases, contact the HPT (in England) for advice on appropriate accommodation.
- For those crew members who have been in contact with a case ask the operators to arrange shore-side accommodation for self-isolation.
- Health and safety of crew takes priority over berthing or mooring vessels.

**Update:** Quarantine rules for arrivals into NI commence on Monday 8<sup>th</sup> June. Persons entering NI, including residents, need to self-isolate at home for 14 days, except those coming from the Common Travel Area or are in an exempt category. <https://www.gov.uk/government/publications/coronavirus-covid-19-travellers-exempt-from-uk-border-rules/coronavirus-covid-19-travellers-exempt-from-uk-border-rules>

### Face-coverings.

The Government's *Our plan to rebuild*, May 2020, p27 now advises "that people should aim to wear a face-covering in enclosed spaces where social distancing is not always possible and they come into contact with others that they do not normally meet".

<https://www.gov.uk/government/publications/our-plan-to-rebuild-the-uk-governments-covid-19-recovery-strategy>

There is also guidance for operators and passengers;

<https://www.gov.uk/government/publications/coronavirus-covid-19-safer-transport-guidance-for-operators>

### Q1 Is there general guidance for the maritime industry to deal with Covid-19?

Yes

<https://www.gov.uk/government/publications/covid-19-shipping-and-sea-ports-guidance/guidance-for-shipping-and-sea-ports-on-coronavirus-covid-19>

<https://www.gov.uk/government/publications/coronavirus-covid-19-safer-transport-guidance-for-operators>

### Q2 Does this guidance cover all maritime situations?

No. The above guidance sets out general principles, but because the maritime industry is so diverse, each incident will need to be assessed on a case by case basis. The local Health Protection Team will advise as required.

### Q3 Can a ship with suspected or confirmed Covid-19 cases dock at a UK port?

Yes. In accordance with the International Health Regulations (IHR), the master of the ship should complete and send the Maritime Declaration of Health (MDH) with details of illness on board to the Port Health Authority in accordance with the local

requirements of the port of call. The MDH should reflect details of illness on board and the Port Health Authority /Local Authority (LA) will advise, in consultation with the local Health Protection Team (HPT). The ship's owner/operator/crew manager and P&I Club should all be notified by the Port Agent. If clinical advice is required, for NI, visit [NHS 111](#) (or call 111 if they don't have internet access). Call 999 if they are seriously ill or injured or their life is at risk. Do not visit the GP, pharmacy, urgent care centre or a hospital.

**Q4 Can a pilot join a ship with suspected or confirmed Covid-19 cases on board?**

Yes. Specific guidance has been issued for them (see Annex 1 below). This guidance covers PPE and social distancing. Pilots do not need to self-isolate after boarding a ship with suspected Covid-19 cases on board, as these individuals with suspected cases should be isolated in their cabins.

From May, the advice on face-coverings changed (p1). Otherwise, there is no change in PPE advice. Ships arriving in UK waters have no right to insist on pilots wearing additional PPE.

**Q5 What is a sensible level of PPE for marine Pilots boarding a vessel with a suspected case of COVID-19 on board?**

Suspected cases should be isolated in their cabins. Pilots should adopt straightforward precautions such as the use of heavy gloves. Government guidance now advises face-coverings (p1). Additional PPE, such as overshoes, is not required and may cause other safety issues (e.g. ascending / descending ladders). The most effective safeguard against inadvertent transmission of virus, such as through changing boots, using handrails etc. is thorough handwashing or the use of sanitising hand gel (minimum 70% alcohol content) and minimising hand to face contact. All efforts should be made to maintain 2m distancing, but it is accepted that might not be possible, e.g. on ship's bridge. In such circumstances common sense should be used e.g. keep symptomatic people or close contacts off the bridge. There is no evidence to confirm that heating, ventilation or air conditioning systems are conduits of COVID-19. As Q4, Ships arriving in UK waters have no right to insist on pilots wearing additional PPE.

**Q6 What is the risk of transmission of Covid-19 on board from air conditioning or sewage treatment systems?** Not yet known, but is unlikely to be significant compared with contamination of surfaces from droplets. The wearing of overshoes is not recommended (they pose a greater safety hazard).

**Q7 Does a ship with suspected or confirmed Covid-19 cases on board need to be quarantined?**

No. The ship should be allowed to dock as usual. This will allow easy access for affected individuals on board to be removed on shore if required. If the ship is unable to leave the port, it can then be moved to a different anchorage if the berth is required for another ship.

**Q8 Should a ship with suspected or confirmed Covid-19 cases on board be treated as a household?**

No. Individuals who are confined to their cabins should follow the same guidance as those confined at home. This does not mean that everyone on board automatically has to self-isolate for 14 days. As the living conditions on different ships vary widely, each case will be considered individually. The Port Health Authority in consultation with the local Health Protection Team will advise (similar but separate arrangements apply elsewhere in the UK).

**Q9 What should happen to suspected or confirmed cases of Covid-19 on board?**

In port, the same guidance applies as for domestic cases. At present, only seriously ill cases should be transferred to hospital (as an urgency). Northern Ireland Ambulance Service will advise on ambulance transfers. Symptomatic individuals who are not seriously ill should ideally be transferred for care ashore, if this is available, but may need to be confined to their cabins on board if this is feasible. They should self-isolate for 7 days from when their symptoms started. If after 7 days, they still have a temperature  $\geq 37.8^{\circ}\text{C}$  they should keep self-isolating until their temperature returns to normal.

They do not need to self-isolate if they only have a cough or loss of sense of smell/taste after 7 days, as these symptoms can last for several weeks after the infection has gone.

At sea, individuals who are confined to their cabins should follow the same guidance as those confined at home. This does not mean that everyone on board automatically has to self-isolate for 14 days. As the living conditions on different ships vary widely, each case needs to be considered individually.

**Q10 What should happen to asymptomatic contacts of suspected or confirmed cases of Covid-19 on board?**

Given the close proximity of living conditions on board the majority of ships, it can be challenging to identify close contacts compared those with a lower likelihood of exposure, depending on the size and configuration of the ship. As with domestic cases, close contacts should self-isolate for 14 days, ideally ashore but on board if unavoidable, bearing in mind the likelihood of contacts becoming symptomatic and contributing to continuing transmission on board.

**Q11 Is testing available for people on board a ship with suspected Covid-19 symptoms?**

Testing for all symptomatic individuals in Northern Ireland can be booked at

[www.nhs.uk/ask-for-a-coronavirus-test](http://www.nhs.uk/ask-for-a-coronavirus-test)

Testing is available at various venues across NI and also through a home postal service.

You should get tested in the first 3 days of coronavirus symptoms appearing, although testing is considered effective up until day 5.

No testing should be undertaken after day 5, unless it's for a specific reason which will be agreed on a case by case basis by local microbiologists.

**Q12 What is the current view of the reliability of testing?**

The test will confirm if a person - who is showing symptoms of the virus - actually has it. It will not confirm whether they have had it and have now recovered. A negative result means coronavirus was not detected when the test was done.

It is vital those who test negative continue to follow guidance including precautions related to self-isolation if appropriate and social distancing.

You can ring NHS 111 for information or advice and they will help you decide if you need to contact your GP for more information.

For more information on what test results mean –

<https://www.nhs.uk/conditions/coronavirus-COVID-19-19/testing-for-coronavirus/what-your-coronavirus-test-result-means/>

**Q13 What assistance is available to a vessel with COVID-19 on board?**

See Q9. The Port Agent should assist co-ordinating any medical care for the crew ashore

**Q14 If a crew member comes ashore and has to recuperate ashore after being discharged from hospital, is there accommodation available for this to happen? Is there a central list of suitable accommodation?**

The Local Resilience Forum may be able to advise about suitable facilities through their liaison with the local hospitality sector. However, these are likely to be limited. There are some facilities available for accommodating key workers who need to travel or transit and workers who need accommodation post discharge.

**Q15 The ship owner/operator/crew manager would obviously be looking to send urgently a replacement crew member so the ship can depart port. Does the UK have any plans for crew change arrangements and what would be the requirements?**

<https://www.gov.uk/government/publications/coronavirus-covid-19-travellers-exempt-from-uk-border-rules/coronavirus-covid-19-travellers-exempt-from-uk-border-rules#seamen-and-masters-as-defined-in-section-3131-merchant-shipping-act-1995-maritime-pilots-as-defined-in-para-221-of-schedule-3a-of-the-merchant-shipping-act-1995-and-inspectors-and-surveyors-of-ships-appointed-under-section-256-of-the-merchant-shipping-act-1995>

Which states:

You'll need to [complete the Public Health passenger locator form](#) before you travel to the UK if you travel in a part of the vessel that is accessible to any passenger for any part of the journey, unless passengers remain in their vehicles in that area (for example on a roll-on, roll-off ferry).

You do not need to complete the Public Health passenger locator form if you travel in a part of the vessel that is not accessible to passengers or you travel on a vessel which does not carry passengers (e.g. fishing boats).

You will not need to self-isolate for 14 days.

If you work on a ship, including fishermen, you should show a Seafarers Identification Document (SID) if you have one.

If you don't have a SID, you can show your joining papers, seafarers employment agreement or a seafarers discharge book (Continuous Certificate of Discharge) instead. Alternatively, you could show a basic training certificate or declaration from the registered owners of the vessel that you are a crew member.

**Q16 If a ship leaves port with a suspected case of Covid-19 on board, how can it be ensured that it will not affect others on board?**

This needs to be carefully assessed on a case-by-case basis with the local HPT prior to sailing. It is preferable that cases, or suspected cases, do not remain on board, but there may be circumstances where this is essential and the health of affected individuals is not being put at risk (i.e. either a very mild illness or someone testing positive who is asymptomatic). In such circumstances, suspected cases should self-isolate.

Also, the length of the proposed journey is important - short voyages will be less risky than long ones and ships with small crews may be more vulnerable to safety being compromised than larger ones. In making a decision to sail, consideration must include realising that though self-isolation may reduce the likelihood of transmission to others, it will not eliminate it completely.

**Q17 Are there any plans to introduce thermal screening at ports?**

Not at present. Current advice is that this is unreliable, as some cases of Covid-19, or pre-symptomatic individuals incubating the disease, do not have a fever.

**Q18 Can crew from ships with suspected or confirmed Covid-19 cases on board be allowed ashore?**

Providing they are not close contacts, they should be allowed ashore for limited exercise and essential shopping, as long as they observe the same social distancing precautions as the rest of the community. This will be risk assessed on a case by case basis in consultation with the local HPT.

<https://www.gov.uk/government/publications/covid-19-guidance-on-social-distancing-and-for-vulnerable-people>

**Q19 Does social distancing guidance apply to both large and small ports?**

Yes. See Q18 above.

**Q20 Does social distancing guidance apply to off-shore wind-farm and offshore oil & gas vessels?**

Yes, insofar as it is possible to. Specific guidance has been produced by Health Protection Scotland.

<https://www.hps.scot.nhs.uk/web-resources-container/guidance-for-prevention-and-management-of-cases-of-covid-19-on-offshore-installations/>

There is additional guidance on practising social distancing, which provides further details for employers and employees:

<https://www.gov.uk/government/publications/staying-safe-outside-your-home/staying-safe-outside-your-home>

and

<https://www.gov.uk/guidance/working-safely-during-coronavirus-covid-19>

This should help organisations, agencies and others (such as self-employed transport providers) understand how to provide safer workplaces and services for themselves, their workers and passengers across all modes of private and public transport. It outlines measures to assess and address the risks of coronavirus (COVID-19) in the transport sector across England.

<https://www.gov.uk/government/publications/coronavirus-covid-19-safer-transport-guidance-for-operators>

Workplaces should follow guidance published by BEIS on safe workplaces and follow the legal obligations they have under Health and Safety legislation to protect their staff at work.

Additionally, workplaces may have specific guidance for protective equipment. The information on face coverings does not replace those workplace recommendations. Workers are advised to follow the specific guidance for their place of work.

<https://www.gov.uk/guidance/working-safely-during-coronavirus-covid-19>

**Q21 Will the local HPT (or similar public health authorities elsewhere in the UK) advise on safe manning levels for a ship to leave port?**

No. This is not within public health area of competence.

**Q22 What input does PHA HPT have in the HSE Guidance on Reporting of Injuries, Diseases and dangerous Occurrences Regulations (RIDDOR)**

All queries about the interpretation of these regulations should be made to HSE.

**Q23 Is it against international law for a ship to sail with Covid-19 cases on board?**

No. There is no applicable international law; there are the International Health Regulations 2005, but their status is as a treaty between Member States. There is, however, a moral obligation to prevent onward transmission to other countries. The NI PHA HPT will advise on measures to prevent onward transmission on a case-by-case basis.

**Q24 What legislation is in place to address the transmission of disease via the maritime sector?**

The Public Health (Ships) Regulations 1979, as amended 2007

In addition, the WHO published interim guidance in February 2020.

<https://www.bing.com/search?q=Operational+consideration+for+managing+COVID-19+cases+and+outbreakson+board+ships.+Interim+guidance+February+2020.+Word+Heal&src=IE-SearchBox&FORM=IESR4A>

**Q25 How is a vessel with an infectious disease stopped from departing port?**

Following a meeting with PHE on 21<sup>st</sup> April, PHE advised that, legally, there were no grounds which could be imposed by them for preventing a vessel from departing from port. In NI, this would need to occur in co-operation between PHA and the Harbour Master and/or Maritime and Coastguard Agency (MCA). In the case of MCA, the only grounds for preventing a vessel departing from port would be by issuance of a prohibition notice or, more likely, a preventative detention. However, it should be noted that an MCA detention could only be issued where a vessel was found to be in breach of the Merchant Shipping Act. Therefore, it is foreseen that the MCA could only prevent a vessel departing port for reasons on Minimum Manning either because the Minimum Safe Manning of the vessel could not be maintained or the vessel could not continue to operate, in the opinion of the MCA in consultation with the vessel's Flag State, in a safe manner.

**Q26 Is a vessel only stopped when a confirmed case is identified; or when a suspected case is identified?**

The presence of Covid-19 on board, whether confirmed or suspected does not prevent a ship from leaving port, unless the criteria in Q25 are met.

**Q27 What happens if crew member(s) had to come ashore and the ship no longer meets the minimum manning requirements?**

The MCA would want to be informed if a seafarer is removed from a vessel and a replacement member of crew could not join the vessel. In discussion with vessel's agent/Master the MCA would request a copy of the Minimum Safe Manning Document and also a crew list. The MCA would then, probably in consultation with the vessel's flag state, determine if the vessel can continue on its voyage safely.

**Q28 Where a vessel is stopped from departing port, whom will be responsible for the welfare of those on board both with the virus (suspected or otherwise) and without?**

The welfare of the entire crew will be the responsibility of the Master/owner/operator/agent. The HPT will need to be advised of the situation regarding confirmed or suspected cases on board and they will advise accordingly. For contacts or remaining crew, the PHA may advise staying on the vessel following self-isolation procedures. Should the situation however require the unaffected crew to leave the vessel then the owner/operator needs to secure accommodation but availability of suitable premises is reducing and there may be a need to engage with the Local Resilience Forum via health officials.

**Q29 What actions are currently being taken with respect to the provisions in the Guidelines on protection of health, repatriation and travel arrangements for seafarers, passengers and other persons on board ships?**

We are generally supportive of the recommendations outlined by the EU and already implemented a range of measures prior to the publication of this guidance. The UK welcomes the guidance particularly in relation to the responsibilities shipping operators and the flag state as we have already taken measures to repatriate British nationals and we are currently monitoring the status of vessels with British crew members to ensure their safety and welfare. In relation to crew changes, the UK is supportive of the EU guidelines to allow crew changes at all ports as this is instrumental to the flow of goods and a letter was sent to UN organisation's a few weeks ago confirming our position on this. We are currently engaging further with the industry to see what more could be done to facilitate crew changes globally. There are some differences in relation to the health measures adopted by the UK as not all vessels are the same and therefore the same blanket approach cannot be used for all maritime settings. Therefore, any incidents on board vessels have to be considered on a case by case basis and masters will need to seek advice from the local Health Protection Team.

[https://eur-lex.europa.eu/legal-content/EN/TXT/?qid=1587132931038&uri=CELEX:52020XC0414\(01\)](https://eur-lex.europa.eu/legal-content/EN/TXT/?qid=1587132931038&uri=CELEX:52020XC0414(01))

**Q30 Do the EU Regulations apply to the UK?**

No. As these are only guidelines, they are not legally binding on the UK during the transition period.

**Q31 What should a seafarer do if challenged about his movement between an airport and the ship?**

Crew should be supplied with a company letter identifying the crew as key workers and including the purpose of travel. Templates have been produced by the ICS, ITF and European Commission.

**Q32 What is the best web-link that stresses that handwashing is absolutely crucial?**

<https://www.gov.uk/government/collections/coronavirus-covid-19-list-of-guidance>

<https://www.publichealth.hscni.net/COVID-19-19-coronavirus>

**Q33 What is being done to ensure consistency between PHE, HSE and the Devolved Administrations?**

As much as possible, PHE is working to avoid contradictory advice, as are colleagues in the DAs, with whom we are working closely on a regular basis.

**Q34 What is the significance of workers who have to be within 2m of each other not doing so for more than 15 minutes?**

A close contact is a person who has been close to someone who has tested positive for coronavirus (COVID-19-) anytime from 2 days before the person was symptomatic up to 7 days from onset of symptoms (this is when they are infectious to others).

A person who has been within 2 meters of someone who has tested positive for coronavirus would be considered a close contact.

Other examples of close contact include:

- people who spend significant time in the same household as a person who has tested positive for COVID-19
- sexual partners
- a person who has had face-to-face contact (within one metre), with someone who has tested positive for COVID-19- including: being coughed on, having a face-to-face conversation, having skin-to-skin physical contact, or any contact within one metre for one minute or longer without face-to-face contact
- a person who has been within 2 metres of someone who has tested positive for coronavirus (COVID-19) for more than 15 minutes
- a person who has travelled in a small vehicle with someone who has tested positive for coronavirus (COVID-19-) or in a large vehicle or plane near someone who has tested positive for coronavirus (COVID-19)

Guidance for safe working is available at

<https://www.gov.uk/government/publications/guidance-to-employers-and-businesses-about-covid-19/guidance-for-employers-and-businesses-on-coronavirus-covid-19>

**Q35 If workers chose to wear their own PPE, who is responsible for disposal?**

They are responsible for the safe disposal of their own PPE. It is not clinical waste and should be double-bagged and disposed of in a waste bin as usual.

**Q36 Can workers over 70 years old return to work?**

There is no unequivocal answer. People over 70 are classified as clinically vulnerable. Some of them with underlying health conditions may be classified as extremely clinically vulnerable (as might some people under 70 who have serious underlying health conditions). Anyone classified as extremely clinically vulnerable should have been notified by letter by their GP. Those people in the clinically vulnerable group are advised to stay at home wherever possible, and practice rigorous social distancing, but, if they can't work from home, *can* go to work, if workplace safety can be assured after a workplace safety assessment. People in the extremely clinically vulnerable category should *not* go to work.

Individual cases should be referred to the employer's Occupational Health Advisor to assess each case on an individual basis.

**Q37 Are the Quarantine Regs introduced on 8<sup>th</sup> June applicable to small boats and yachts and also ports without a Border Force presence?**

This is a policy issue which will have to go to the Home Office, of local Border Force officer to answer.

**Q38 If an employee is contacted by NI Contact Tracing Service and advised to self-isolate for 14 days, could they return to work early following a risk assessment and mitigation measures being put in place?**

Every contact of a confirmed case is risk assessed by the Contact Tracing Service. If a contact is assessed to be a close contact at high risk of acquiring infection, the advice in all circumstances is to for the individual to self-isolate for 14 days from last contact with the confirmed case.

**Q39 Does the husband & wife crew of a yacht which has taken 16 days to sail across the Atlantic without calling anywhere before the UK need to self-isolate for 14 days in accordance with the Quarantine Regulations?**

Despite the obvious observation that the journey was longer than the Covid-19 incubation period, there is no exemption in the Regulations for such an event.

**Q40 Does a crew change need to be recorded on the Maritime Declaration of Health?**

If a MDH is issued by a ship, any passengers or crew who have joined “since international voyage began or past thirty days, whichever is shorter” should be listed, “upon request of the competent authority of the port of arrival” (IHR2005, Annex 8). The corollary is that crew or passengers joining the ship do not, of themselves, require a MDH to be issued if the ship is free from infection (unless local requirements differ). Any crew who have joined a ship, who are still within the incubation period of Covid-19, are exempt from the Quarantine Regulations (see Q18).

**Contacts**

The HCU number is 020 8745 7209. This number is available 24/7

**Key Contacts**

- Contact details for UK Port Health Authorities (PHA) available here (<http://www.porthealthassociation.co.uk/>)
- For Northern Ireland (NI), if clinical advice is required, visit [NHS 111](#) (or call 111 if internet access is not available).
- Call 999 if seriously ill or injured or their life is at risk. **Do not visit** the GP, pharmacy, urgent care centre or a hospital.  
If advice from the NI PHA Health Protection Service is required, 24/7 contact can be made via the Harbour Master.

## Annex 1

### **Coronavirus Resilience: Maritime Pilot Transfer Arrangements - suggested procedure at UK ports - 31 March 2020**

This guidance note has been prepared in consultation with a collection of UK maritime trade associations (British Ports Association, UK Maritime Pilots' Association, UK Harbour Masters' Association and UK Major Ports Group) and is designed to give some non-prescriptive options to help pilotage authorities remain resilient. There are a wide variety of pilotage options around the UK and our approximately 500 maritime pilots are an important component in facilitating a wide number of shipping movements, helping to maintain supply chains and trade. Pilots and other port and maritime operatives have been identified as 'Key Workers' by the Government and therefore expected to carry out their roles in as normal a way as possible whilst being mindful of advice on limiting the potential spread of COVID-19. The guidance is intended to supplement other local transfer advice such as already exists or be integrated, either in full or in part, where appropriate. It does not attempt to alter or replace the safety advice contained in the Pilotage Boarding and Landing Code or any Workboat Codes merely highlight procedures that will contribute to limiting the risks presented by infectious diseases such as COVID-19. The guidance is non statutory and harbour authorities may wish to use sections as appropriate.

#### Suggested procedures:

Like many Key Workers in other occupations, it will not always be practically possible to follow the Government's guidance to maintain a two-metre distance at all times during pilotage and pilot cutter operations. However the following measures could greatly reduce the likelihood of spreading COVID-19 if followed closely as far as practically possible but subject to review:

- Prior to boarding a cutter, the coxswain and crew should ensure they are not suffering with any of the symptoms of COVID-19 nor are any members of their household, i.e. the people they live with (in this case they should self-isolate in line with Government guidance)
- The cutter crew shall have all washed their hands thoroughly prior to boarding the cutter
- The coxswain/crew shall ensure that the cutter is clean and that appropriate areas such as handrails and seats are wiped down with a soap-based or disinfectant solution or wipes after each run. They should also aim to have an on board supply of hand sanitiser/wipes which are used regularly, especially on entry into the cabin
- Where possible the cutter should be as ventilated as possible with fresh air
- The pilot shall also be symptom free, having thoroughly washed their hands prior to boarding
- If the pilot is joining from a ship, the cutter crew should where possible provide disposable hand wipes to the pilot and have a suitable way to dispose of them after use
- Pilots should observe the highest precautions with their own health and to minimise exposure whilst on board the cutter, and minimise physical contact with cutter crew members if not essential or use of gloves where possible, maintaining as much distance as practical
- To aid physical distancing, for some operations the Competent Harbour Authority may wish to limit the number pilots transferred on a single cutter and, subject to boat size and seating arrangements attempt to maintain as close as is possible to a 2 metre space for those on board
- Consumption of food or drink whilst on board the cutter should be avoided unless essential

- Prior to boarding or landing the Pilot, the coxswain can, if possible, confirm via radio with the master of the ship that previous advice provided to the harbour authority/VTS that all on board are healthy. Some authorities may choose to seek this confirmation through their VTS.

Added 8<sup>th</sup> June 2020 – see guidance on face coverings on p1
