Section 1: Background

Public Health Agency (PHA) works alongside other statutory agencies, community pharmacies, community and voluntary organisations, low threshold services and hostels to provide the Needle and Syringe Service (NSES) and Take Home Naloxone (THN) programme across the region. PHA use an online Harm Reduction Information System called Neo360 to capture live data on needle exchange and naloxone transactions across all sites. All data captured is anonymous and non-identifiable.

NSES is vital to the health and wellbeing of the entire community by helping to reduce the spread of blood-borne viruses (including HIV, Hepatitis B and C), reduce needle discards and by offering harm reduction advice and support to those using the service.

The Take Home Naloxone programme has become an integral part of NSES and aims to supply naloxone packs to those at risk of opioid overdose. Naloxone temporarily and rapidly reverses the effects of an overdose.

Currently the PHA have;

- 24 sites delivering NSES only

- 2 sites delivering THN only

- 11 sites delivering both NSES and THN

- 17 hostel sites who have a supply of Naloxone to administer in an emergency only (legally can not make direct supply to the public)

This quarter one new site was opened within the Ormeau Centre in Belfast.

This report summarises data that has been collated by Neo360 within the three months period between 1 April 2024 to 30 June 2024.

Harm Reduction Service providers

Between 1 April 2024 and 30 June 2024 the following sites providing NSES and/or Naloxone as shown in Table 1 below;

Section 2: Regional Data Review

Needle and Syringe Exchange Service

Within the three months period between 1 April 2024 to 30 June 2024 needle exchange activity was recorded in 34 active sites throughout this period.

There have been 1096 new clients registered on Neo360 using NSES within this reporting period.

In terms of unique client usage for the reporting period, there was a total of 3,194 unique clients across Northern Ireland. When this report is run per Trust area this totals 3,393 unique service users which suggests that 199 clients are crossing Trust boundaries to access multiple needle exchange services. This is a reduction from the previous reporting quarter, January to March 2024 as 227 clients were crossing Trust boundaries. This suggests that people are travelling less to access NSES and with the opening of new exchanges, services are more accessible.

This report includes the regional data across Northern Ireland, followed by a breakdown per Trust.

The following information is collated:

Total number of transactions;

Current Age of clients;

Transaction by provider type;

Gender of clients;

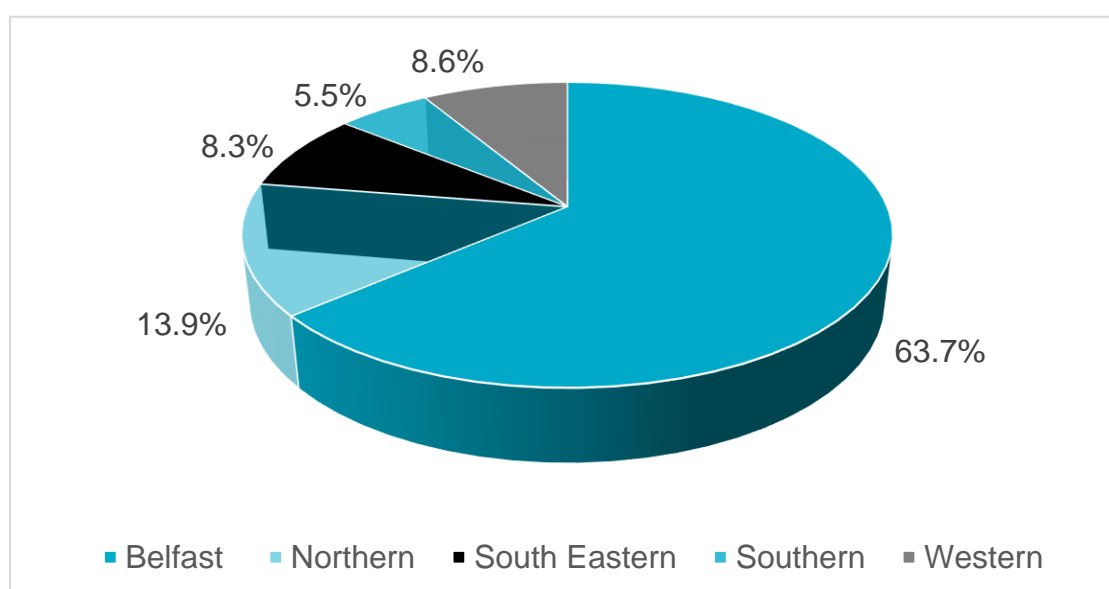

Transaction by Trust location;

Recorded substance/s used.

Needle and Syringe: Key findings and trends

From 1 April to 30 June 2024 there were a total of 7,614 NSES transactions carried out across Northern Ireland. This quarter has increased from last quarter by 409 transactions but comparing this to the same period last year shows a decrease of 566 transactions. However, there is no reduction in the amount of equipment which has been dispensed, despite the drop-in transaction numbers.

Figure 1: Percentage of transactions by each Health and Social Care Trust Area from 1 April 2024 to 30 June 2024

The highest number of overall transactions continues to take place in the BHSC area (4848 transactions) and the lowest percentage of transactions continue to take place in the SHSC area (174 transactions). However, due to the expansion of NSES within the SHSC over the last year we have seen an increase in the number of transactions in this area. In the same time frame in 2023, SHSC completed only 3.7% of the overall transactions.

Most commonly used provider type across the region

Figure 2: Number of NSES transactions by Provider Type

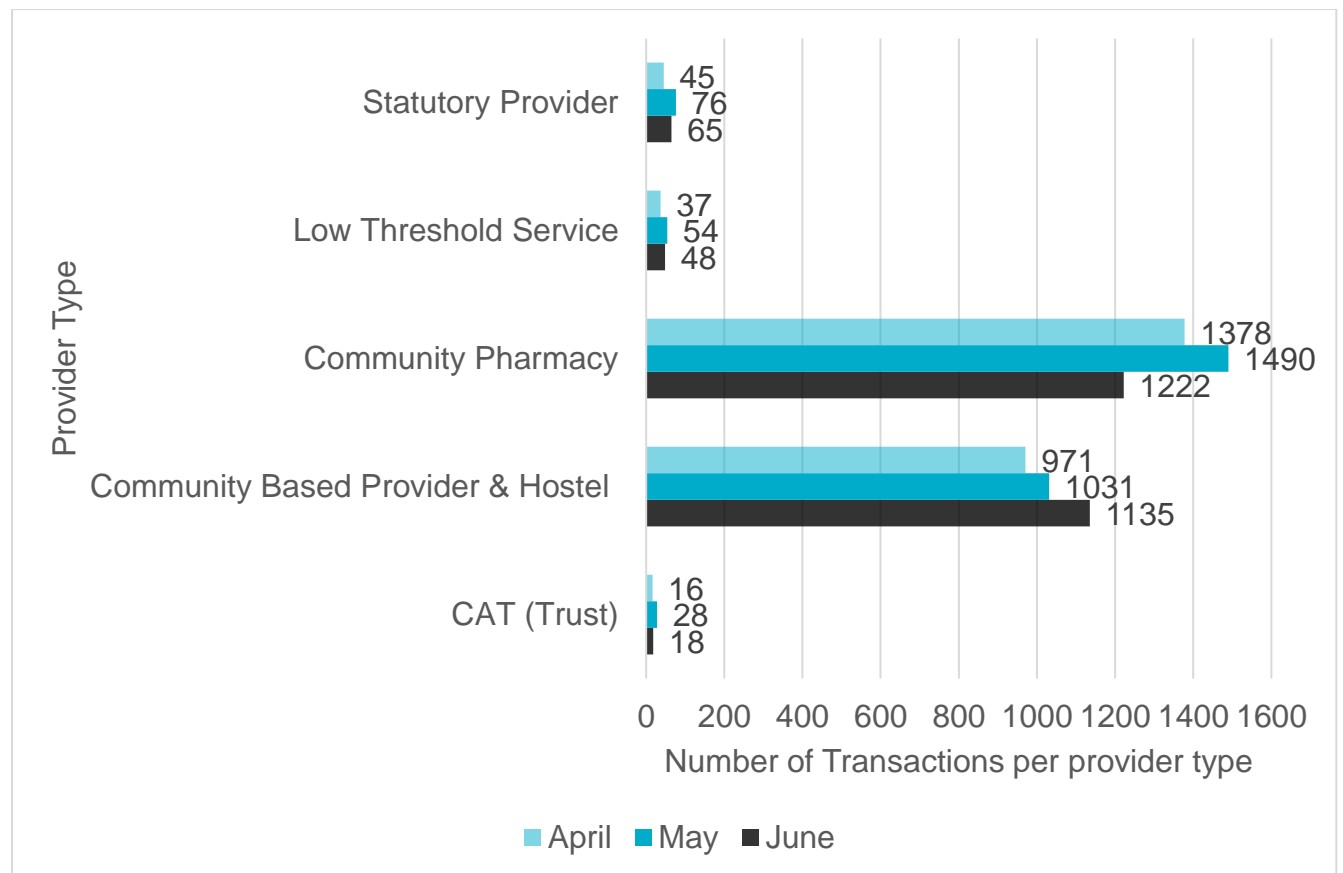

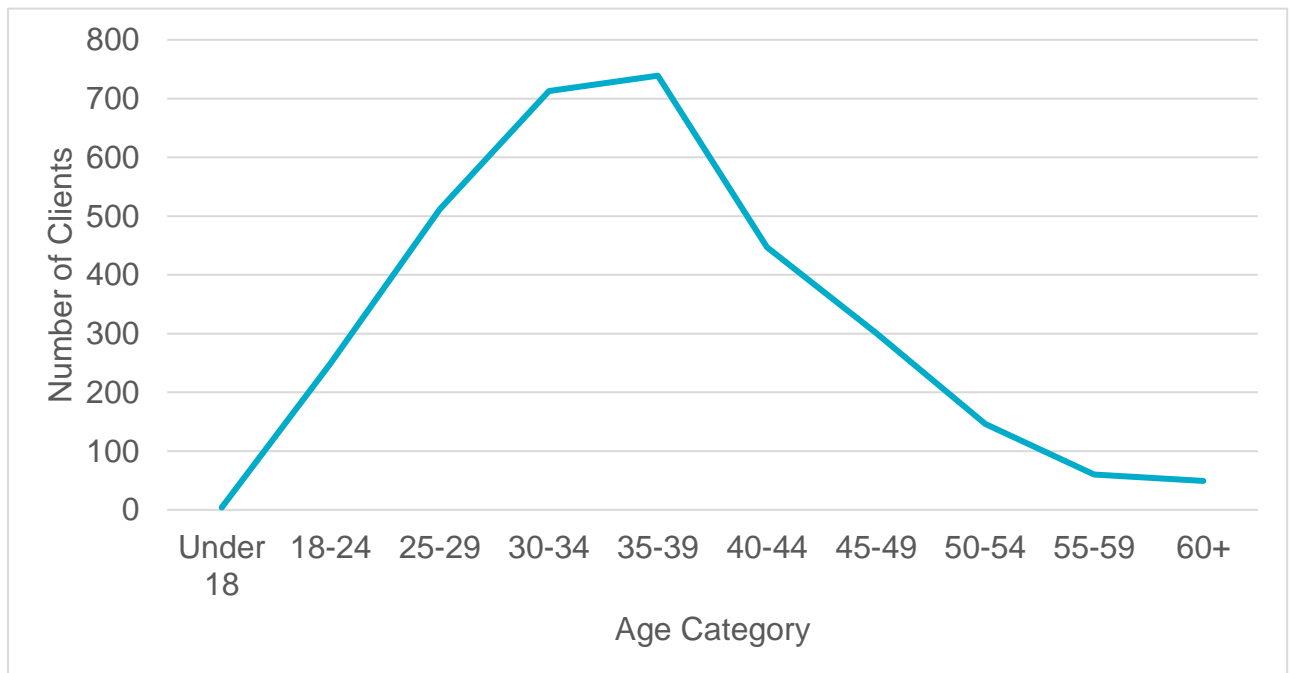

Figure 2 reflects that the community pharmacies completed the majority of transactions (53.7%) for the reporting period, followed by the community-based providers who have completed 41.2% of the total transactions.

NSES User Profile

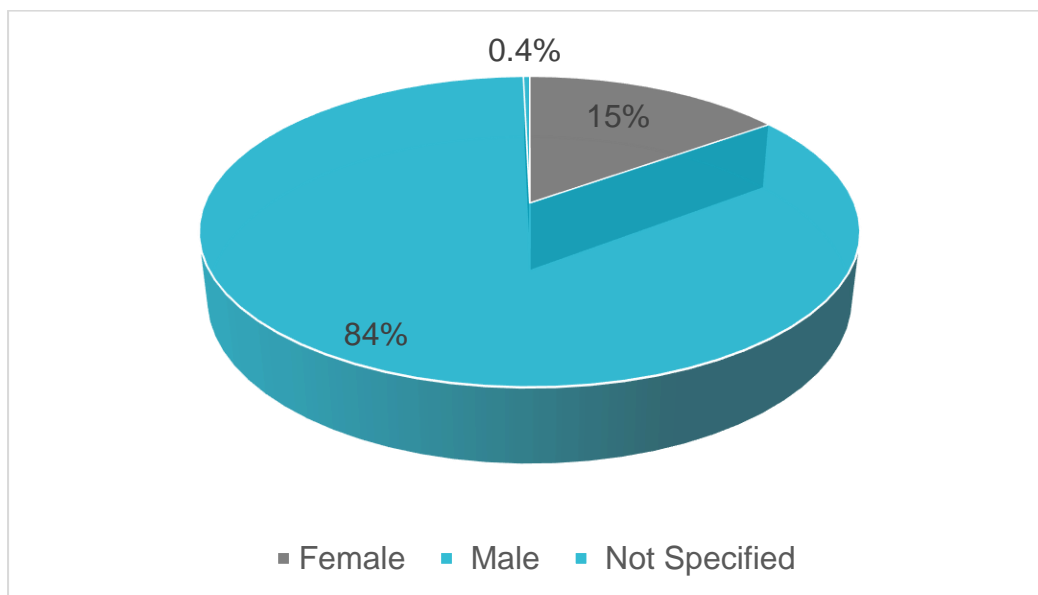

The age and gender profile of the clients using NSES within the reporting period are shown in Figure 3 and 4.

Figure 3: Current age of clients using NSES within reporting period.

The most common age category of clients using NSES is 35-39 years (739 unique clients) followed by those aged 30-34 years (713 unique clients). Similarly, of the 1076 new clients registered for the service, the most common age bracket is 35-39 years (232) followed by age 30-34 years (216).

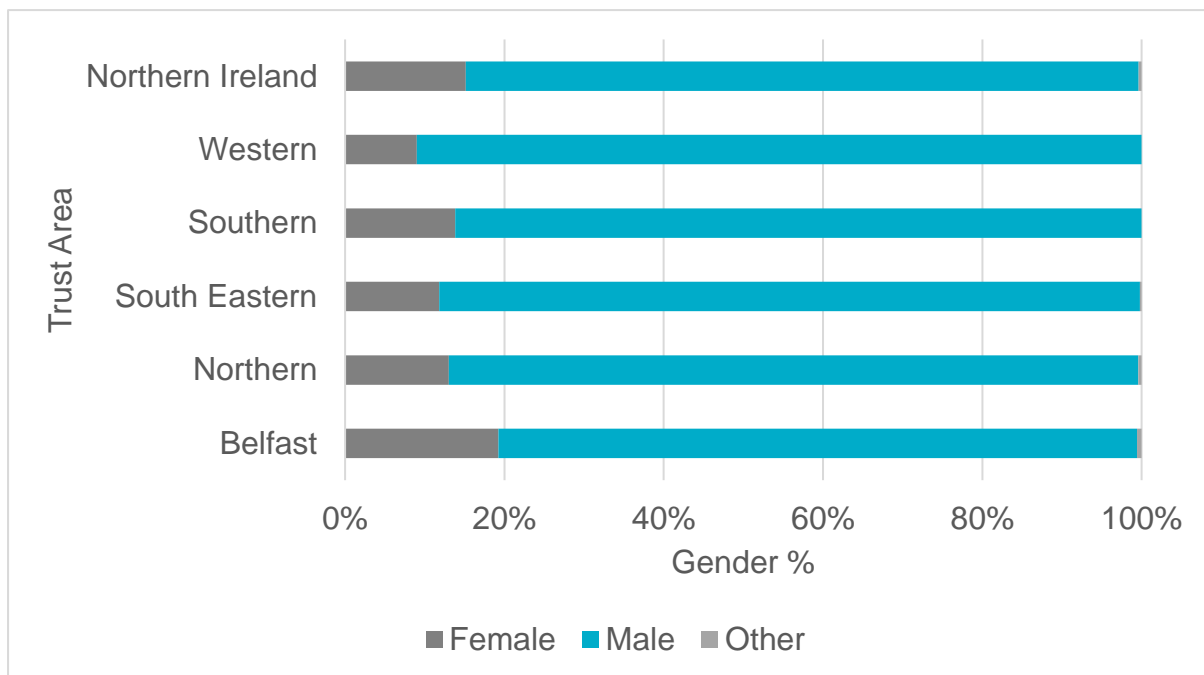

Figure 4: Gender of Clients using NSES within the reporting period

The pie chart reflects that the NSES service is primarily accessed by males (84%). For those newly registering with NSES in the reporting period, 82% were male and females made up 17%. The number of females registering and using the service continues to grow.

Figure 5: Gender (%) of clients by Trust area

Figure 5 shows the gender breakdown by Trust of clients registering for needle exchange this quarter. Whilst overall this remains a male dominated service, as noted above there has been a sharp increase of female clients using the service across Northern Ireland, specifically Belfast area (19% females).

Recorded Substance used

The graph below reflects the reported substance used by clients for each transaction. Clients may report more than one substance in response to this. For the second quarter of 2024, cocaine powder (2312) has the largest recorded usage within needle exchange clients. Heroin (1942) has the second largest reported usage closely followed by anabolic steroids (1,876). 2209 substances recorded as unknown. This reflects the continued trend since December 2023, where cocaine has now become the most reported substance used. Within the same quarter last year, heroin was the largest recorded usage followed by cocaine powder.

Figure 6: Number of Recorded substances used across region

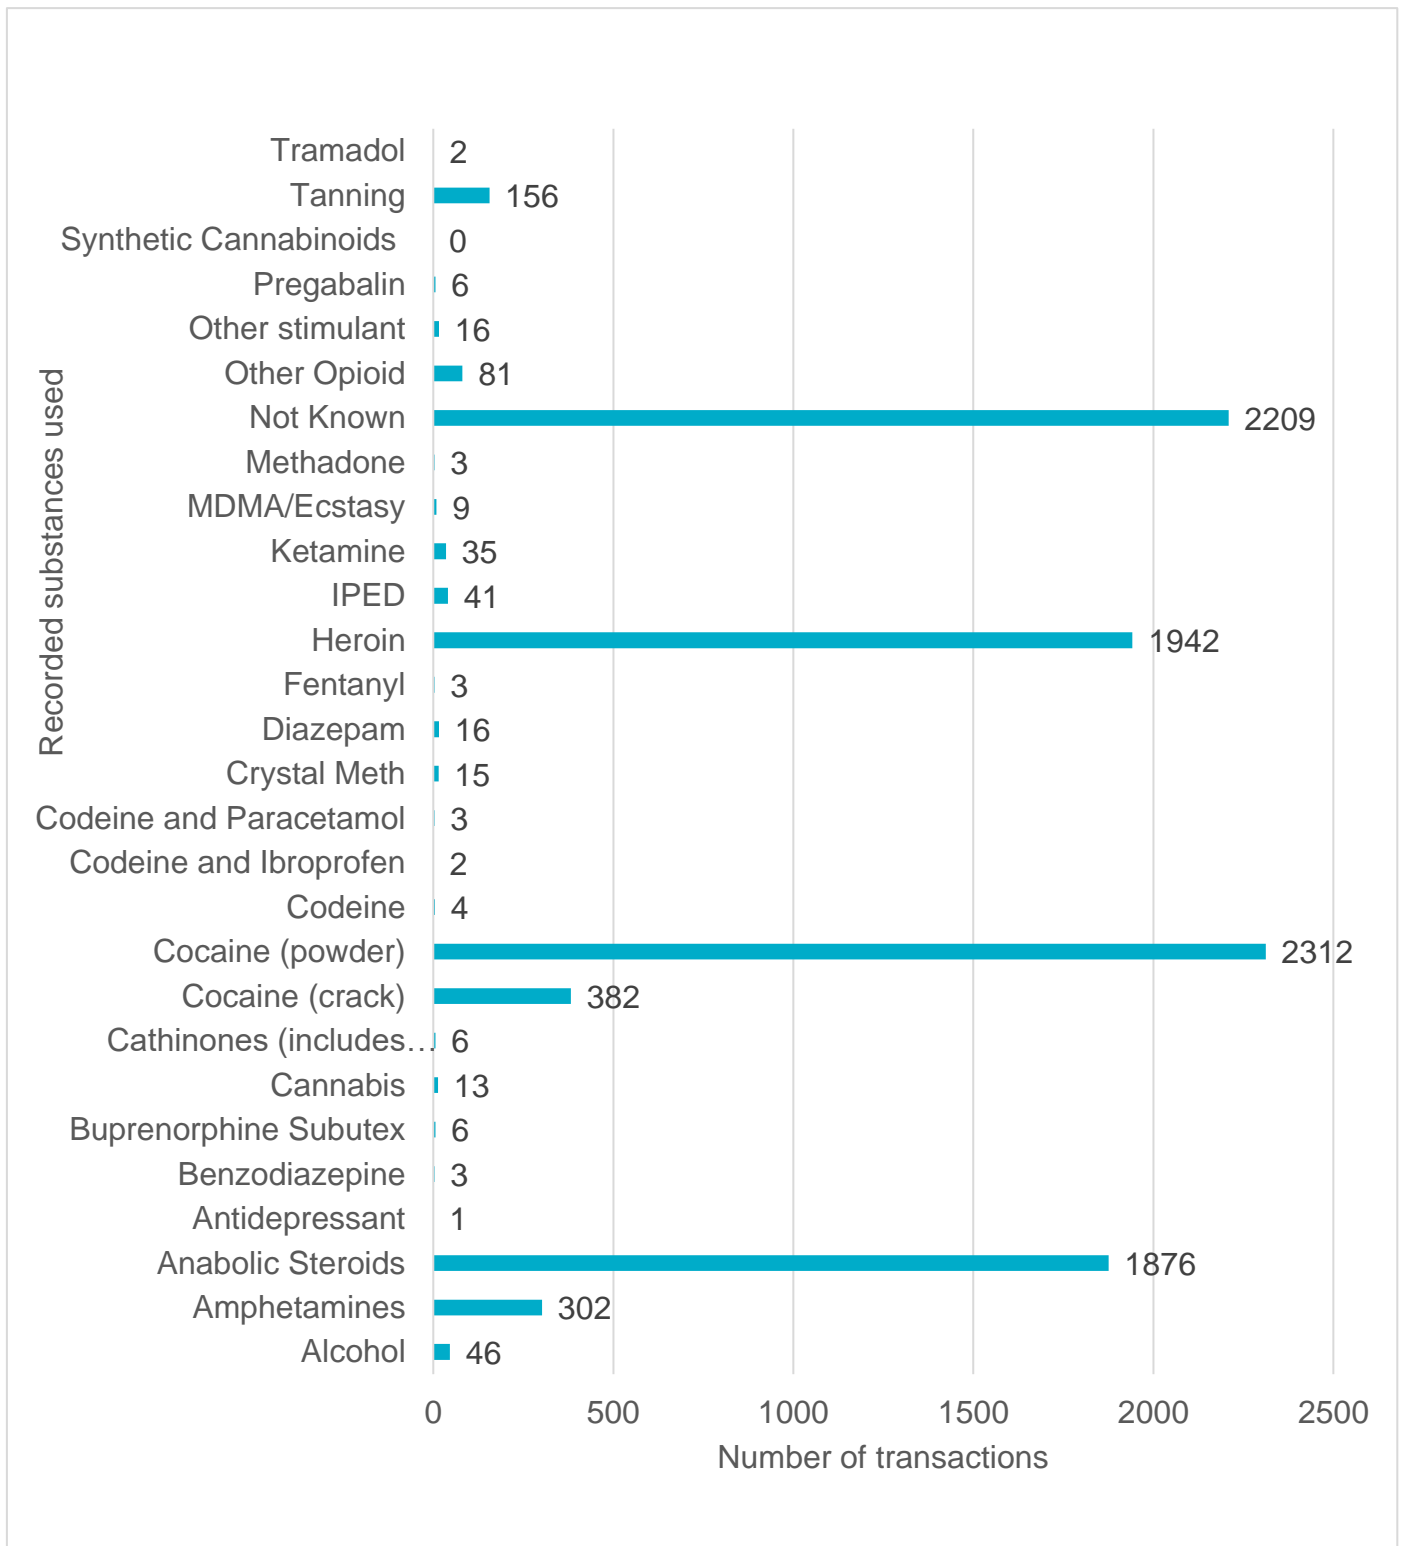

Table 2: Number of clients using most reported substances from 1 April 2024 to 30 June 2024

Substance	Number of NSES unique clients using
Anabolic Steroids	1315
Heroin	425
Cocaine (powder)	414

Although cocaine was reported most frequently during transactions, the number of unique clients using anabolic steroids by far exceeded those using cocaine or heroin.

Table 3: Quantity of Needles Dispensed

Please see below a breakdown of the needles dispensed across all needle exchange sites for the reporting period. A total of 172,844 needles were dispensed across needle exchange in Northern Ireland. This is an increase of 11,820 compared with last year (161,024 needles dispensed from the same time period in 2023).

Category	Item	Total
Needles	Needles 16mm [5/8 inch] orange	3190
Needles	Needles 25mm [1 inch] blue	1584
Needles	Needles 25mm [1 inch] orange	4408
Needles	Needles 30mm [1 1/4 inch] blue	37842
Needles	Needles 38mm [1 1/2 inch] black	608
Needles	Needles 40mm [1 1/2 inch] green	36314
Needles	0.5ml Fixed Syringe	52538
Needles	1 ml 30G unisharp fixed	35868
Needles	0.3ml unisharp fixed	392
Total Needles Dispensed		172,844

Basic principles are that the shorter needles are used for surface vein injecting (arms, hand, feet etc), and the longer ones for deeper veins (legs and groin) and steroids which are intramuscular injections.

The 0.5ml and the 1ml unisharp are the mainstay of all injecting equipment, they are the shortest and thinnest needles and also the lowest dead space syringes. It is positive from a harm reduction perspective these continue to be used frequently within needle exchange with 88,406 (51.1%) in total dispensed in the reporting period. The last quarter seen the introduction of 0.3ml fixed syringe into needle exchange to promote the use of even smaller needles, targeting female injectors especially.

The highest dispensed needle heads are blue (30mm) and green (40mm) with a total of 74,156 (42.9%) dispensed in the reporting period. These are the largest needles which are used with a 2ml syringe for both groin injecting and steroid injecting.

Use of Foils

In promoting harm reduction, staff within needle exchange sites are encouraged to dispense foils which will support smoking, thus, reducing the harm caused through injecting. 15 sites dispensed 701 packets (20 sheets per pack). This is a large reduction from the same period of last year where a total of 1688 packs were distributed.

Returns

This quarter 29,973 estimated needles were returned within exchanges. This is a return rate of 17.3%. This is an increase of returns from the previous quarter (23,459 returned). Clients are encouraged to return used needles at every transaction.

Take Home Naloxone Programme

Within the three months period between 1 April 2024 to 30 June 2024 Take Home Naloxone was recorded in 13 active sites throughout this period. This was the first reporting period that the THN programme was fully on Neo360, having previously reported usage via a manual system.

THN includes the take home supply or emergency administration of the following products:

- Prenoxad® 2mg/2ml pre-filled syringe for intramuscular injection.
- Nyxoid® 1.8mg nasal naloxone spray x 2 doses
- Pebble® 1.26mg intra-nasal spray x 2 doses

The following information is collated on Neo360:

- Recording of the dispensing of naloxone as an initial supply (first use of the service and requires trained in usage) or resupply (registered previously and training up to date)
- Number of units of naloxone dispensed
- If resupply, information of usage of previous unit requested ie if it was used to reverse overdose, stolen, expired, lost, service user not carrying naloxone and has expressed an intention to use opiates or not specified.

The PHA requests only minimal information on supply so that clients can remain anonymous and unidentifiable when given the initial supply. When naloxone is then resupplied to someone who has used it to reverse an overdose, the PHA requests additional information about the overdose, in order to build a better picture of how naloxone is used and its impact in reversing overdose.

Take Home Naloxone: Key findings and trends

Between 1 April 2024 and 30 June 2024, a total of 404 naloxone kits were dispensed and recorded on Neo360

Table 4: Number of Naloxone packs reported to have been dispensed to providers and administered by providers in an emergency.

Month	Number of THN packs dispensed
Initial supply	135
Resupply	188
Emergency use by staff	43
Public Naloxone Administration training sessions	38
Total kits	404

The reported distribution includes 135 initial kits supplies to those who were newly registered onto the THN programme and received training as part of their registration. There were 188 resupplied kits to those who were previously registered for THN but required replacement naloxone supplies. In addition, 38 kits were dispensed as part of naloxone administration training.

The most common type of naloxone dispensed was Prenoxad 2mg/2ml pre-filled syringe for intramuscular injection.

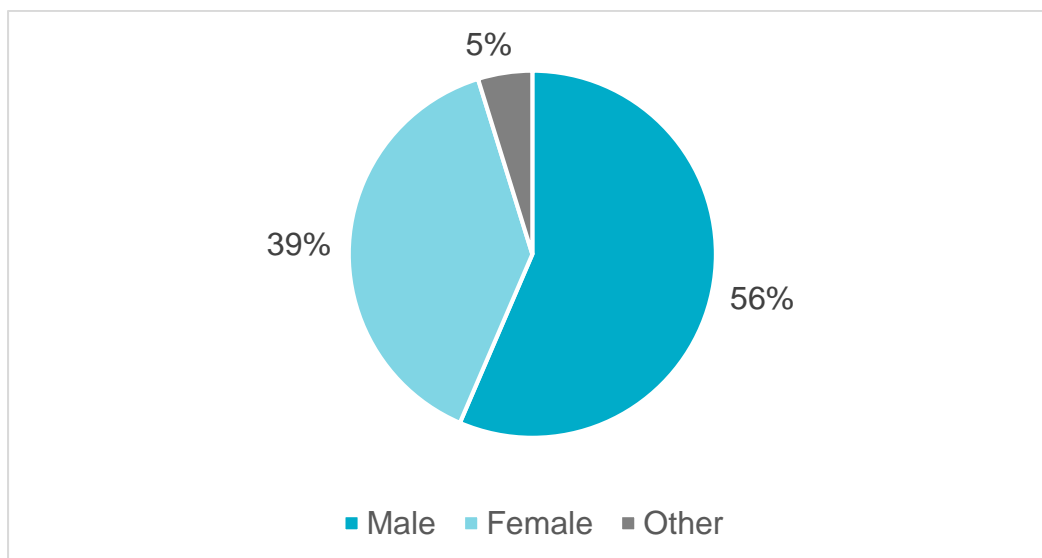

Take Home Naloxone packs used to reverse an overdose

During the period 1 April 2024 and 30 June 2024, naloxone was reported to have been administered on 104 occasions. This includes the number of times naloxone was reportedly used to reverse an overdose, reported at resupply (61) and the number of times naloxone was used in an emergency by staff (43).

THN User profile

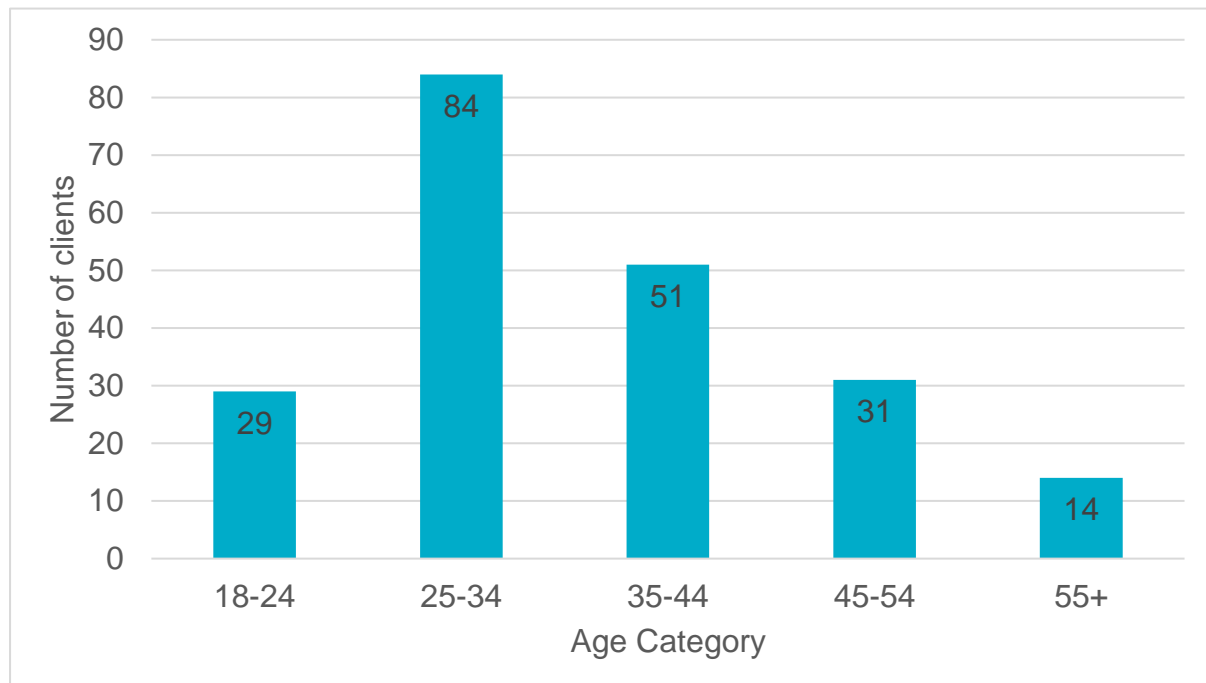

The age and gender profile of the 209 reported users of the THN programme within this reporting period is shown in Figures 7 and 8. This does not include those service users who were administered naloxone in an emergency, or kits dispensed for training purposes as the gender and age is not recorded on Neo360.

Figure 7: Gender breakdown of clients supplied (Initial and Resupply) with Naloxone in reporting period (n=209)

Males (118 transactions) made up the majority of clients using THN however a high number of females (83 transactions) are actively using THN programme also

Figure 8: Recorded age of clients supplied (Initial and Resupply) with Naloxone in reporting period (n=209)

The most common overall age group of clients supplied with Naloxone was age 25 – 34. Followed by those aged 35-44.

Section 3: Belfast Health and Social Care Trust Area NSES Data

In the Belfast Health and Social Care Trust Area (BHSCT) within the reporting period there were:

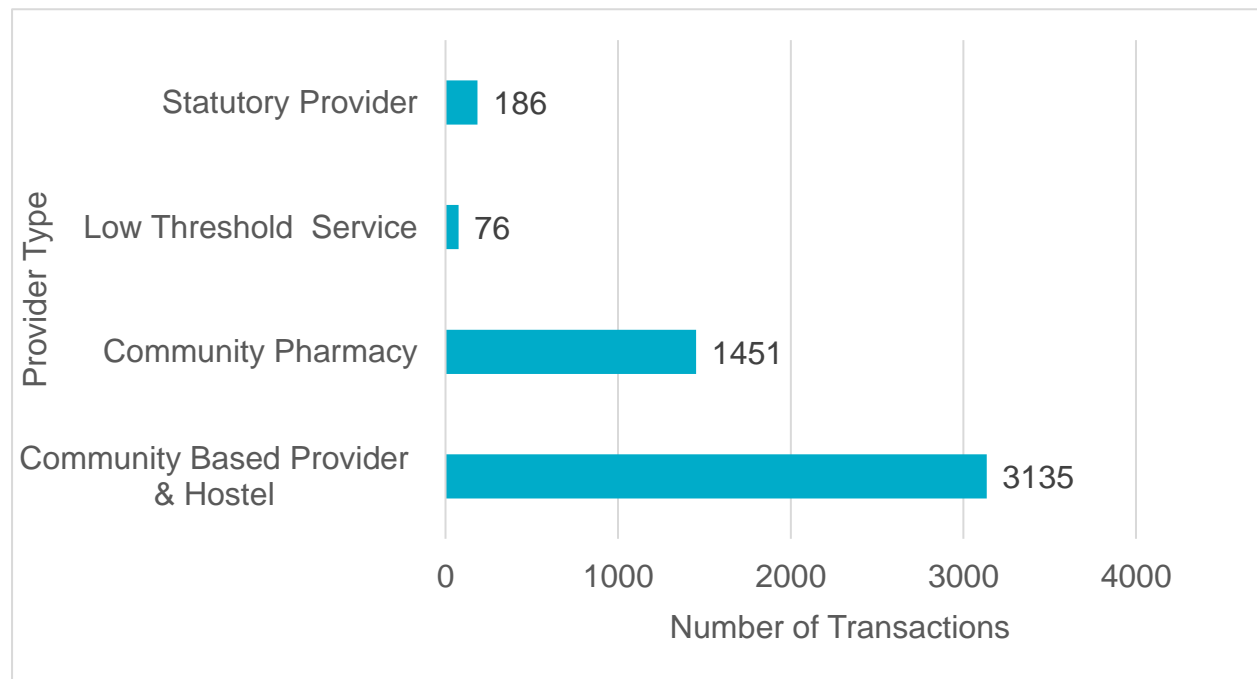

4,848 NSES transactions completed

1,522 unique clients using NSES

387 new clients registered for NSES

93 anonymous transactions completed

Figure 10: Number of Transactions per provider type in BHSCT

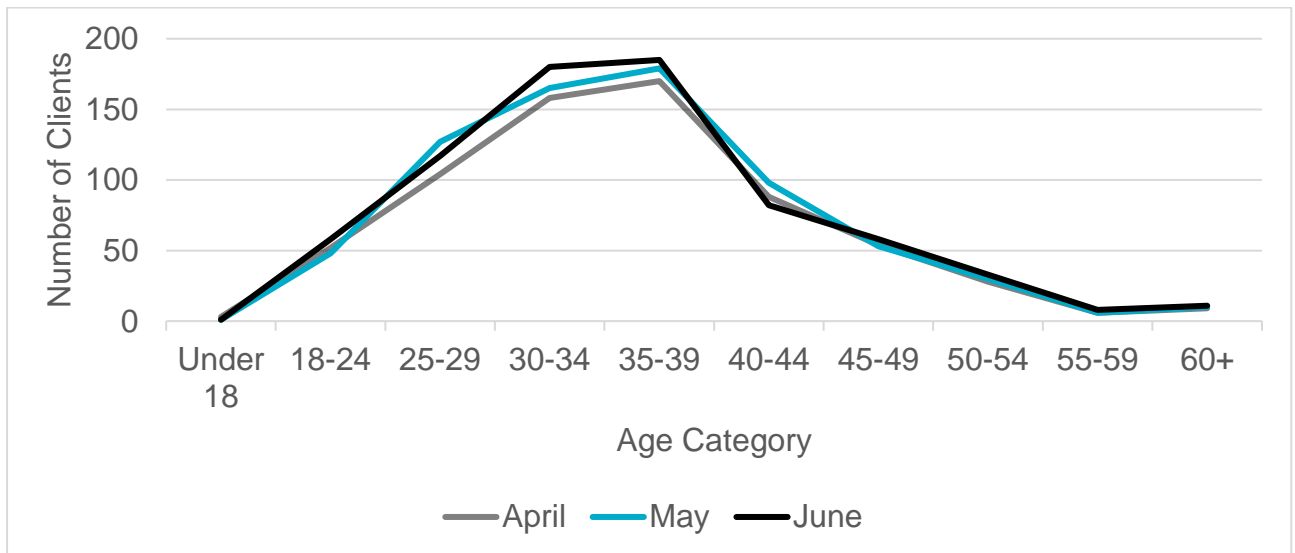

Community based providers (including hostel providers) remain to be completing the highest volume of transactions (65%) for the BHSCT.

NSES User Profile

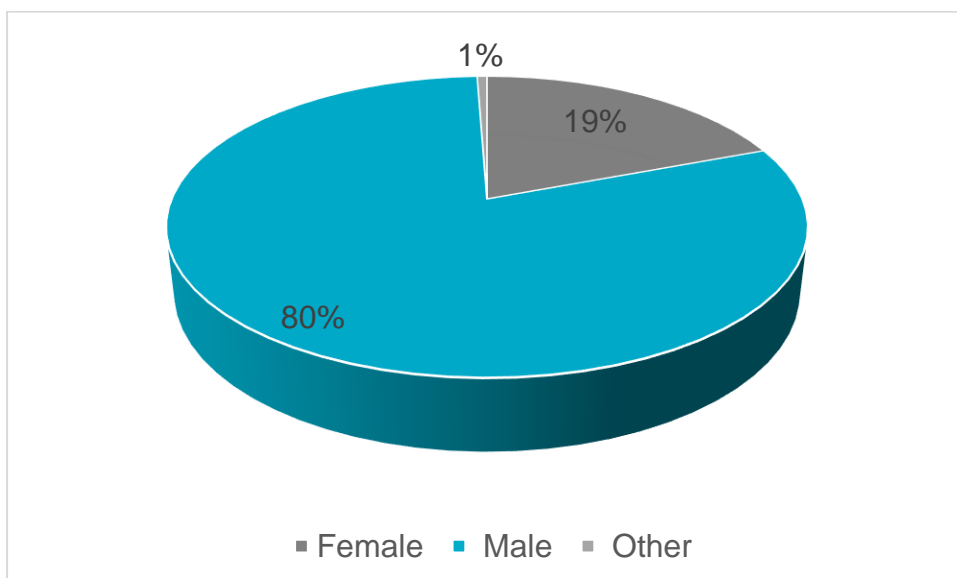

The age and gender profile of the unique clients who have completed a transaction within the reporting period is shown in Figures 11 and 12.

Figure 11: Current age of clients in BHSCT

The most common overall age group of users in BHSCT were those aged between 35-39 years. For new clients registering, the most common of age group were those between 30-34 years.

Figure 12: Gender of clients in BHSCT

The majority of unique using the service were male (80%) and females (19%). The number of females using the NSES is increasing and of the 387 new clients registered with the service in the reporting period, 22% of those were female.

Figure 13: Recorded Substance used by transaction in BHSCT.

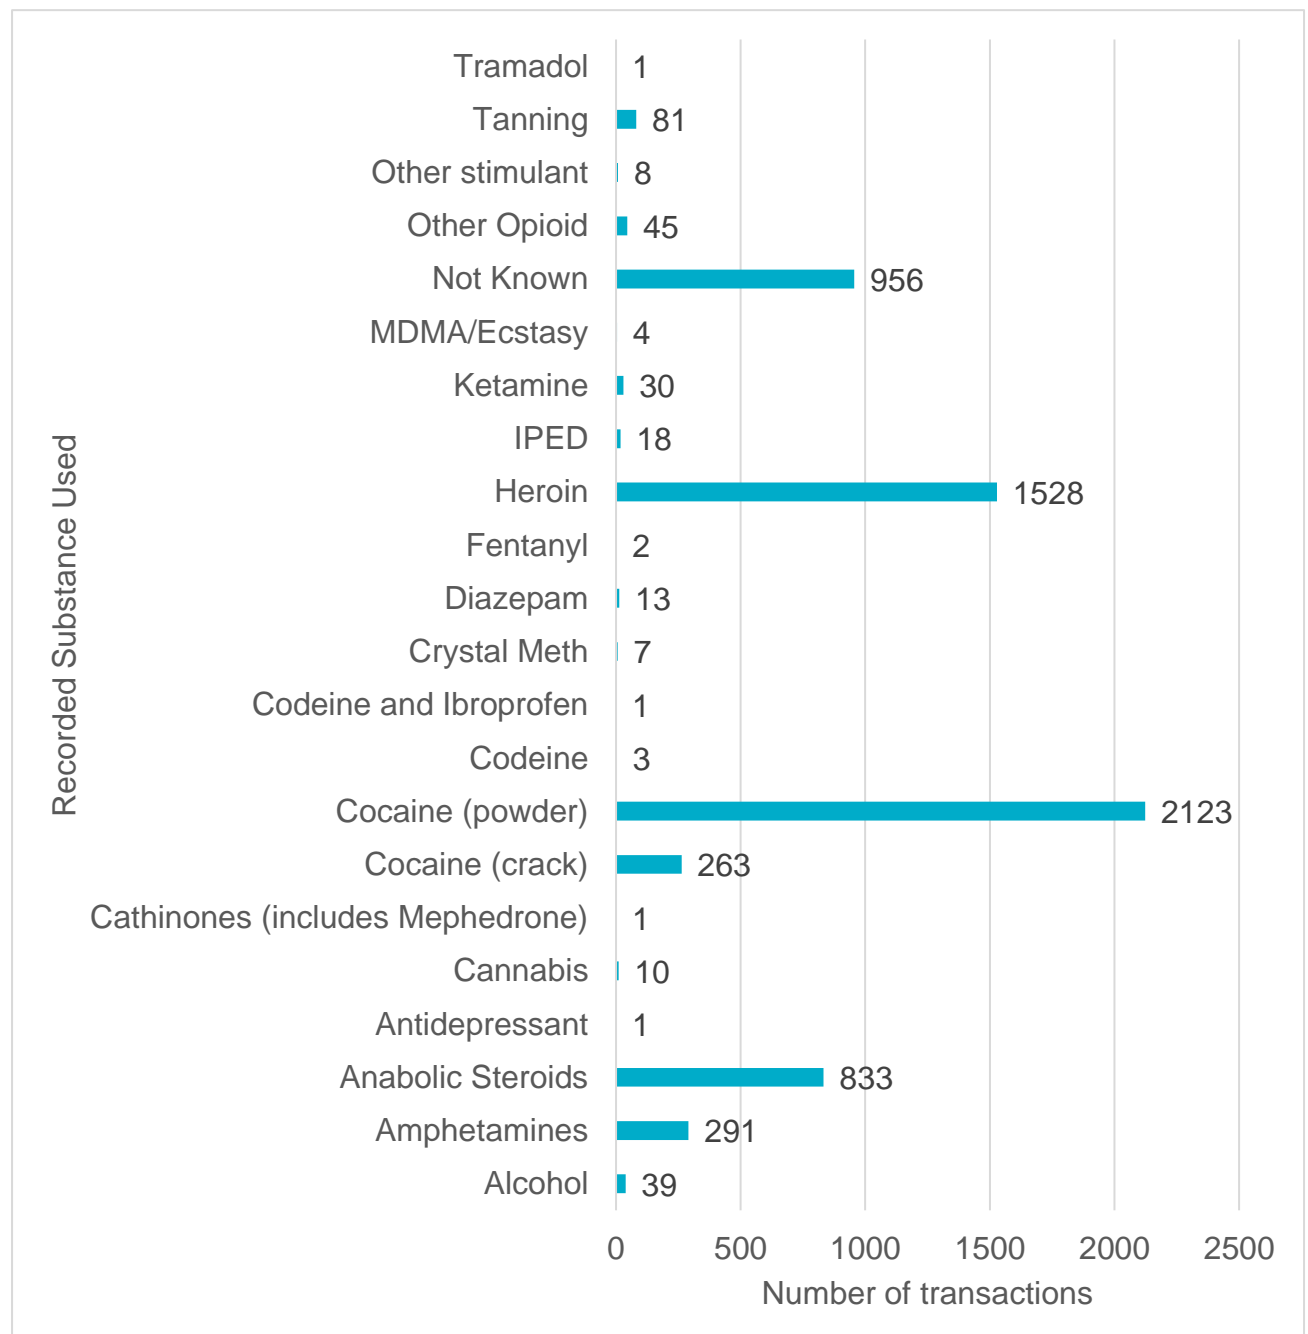

Figure 13 reflects that of the 4,848 transactions in this reporting period, 6258 reports of substance used were recorded across 22 substances. This includes those selecting 'unknown' category which was 956 (19.7%).

The largest recorded substance used was cocaine powder (2,123) followed by heroin (1,528) and anabolic steroids (833).

Section 4: Northern Health and Social Care Trust Area NSES Data

In the Northern Health and Social Care Trust Area (NHSCT) within the reporting period there were:

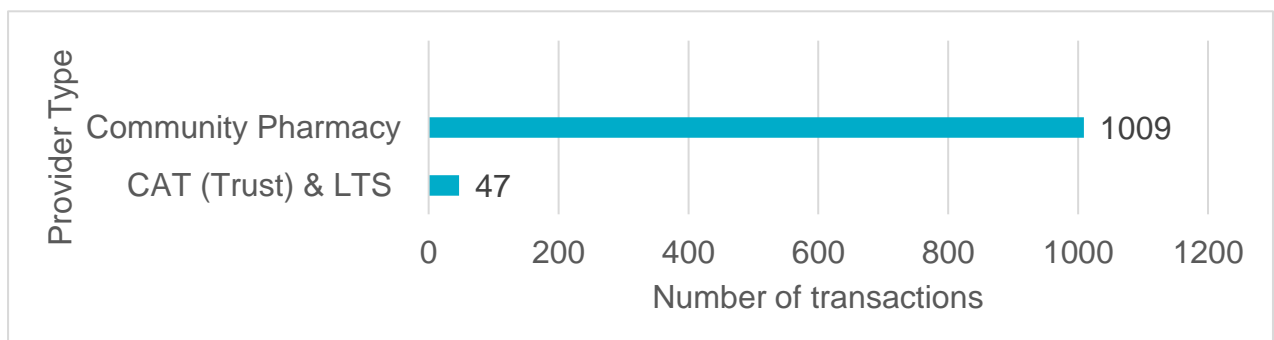

1056 NSES transactions completed

698 unique clients using NSES

267 new clients registered for NSES

5 anonymous transactions completed

Figure 14 Number of transactions per provider type in NHSCT

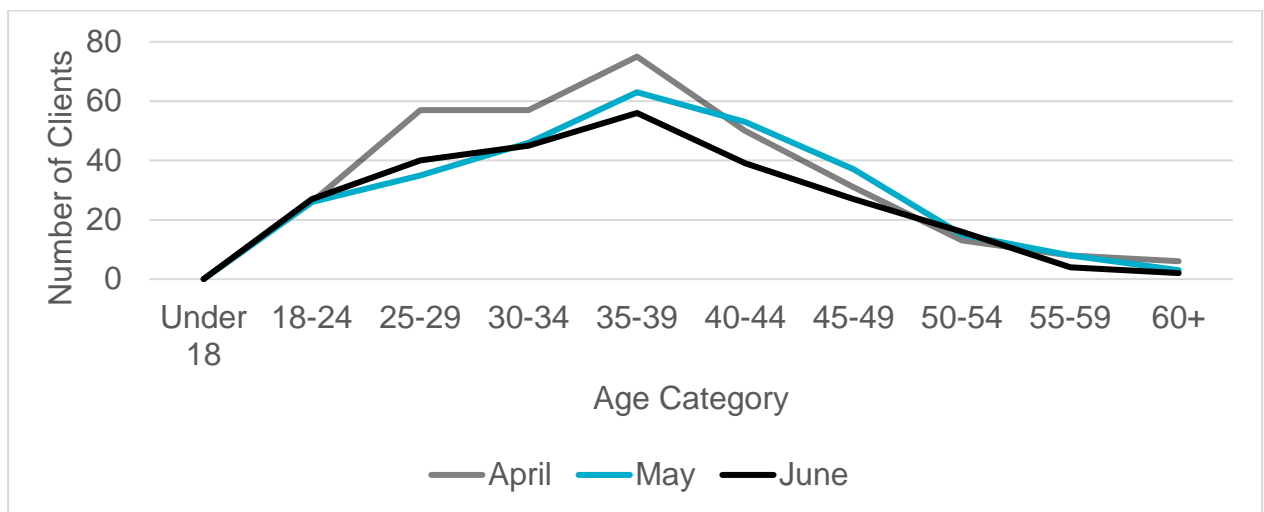

Community pharmacy remains the most common site for transactions within NHSCT (1009).

NSES user profile

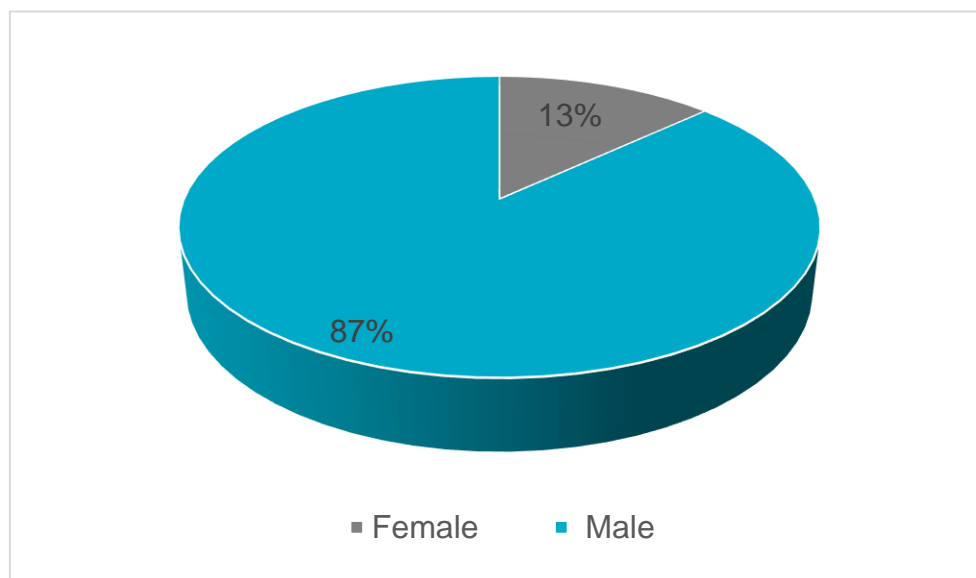

The age and gender profile of unique clients who have completed a transaction within the reporting period is shown in Figures 15 and 16.

Figure 15 Age profile of users in NHSCT

The most common age group of clients using NSES were in the age category 35-39 years. Similarly, the most common age group of new clients in NHSCT was aged 35-39 years.

Figure 16 Gender profile of users in NHSCT

Similar to the previous quarter, the majority of clients were males (87%) compared with females (13%). Of the 267 new clients registered, males (86%) and females (14%).

Figure 17 Recorded Substance used by transaction in NHSCT

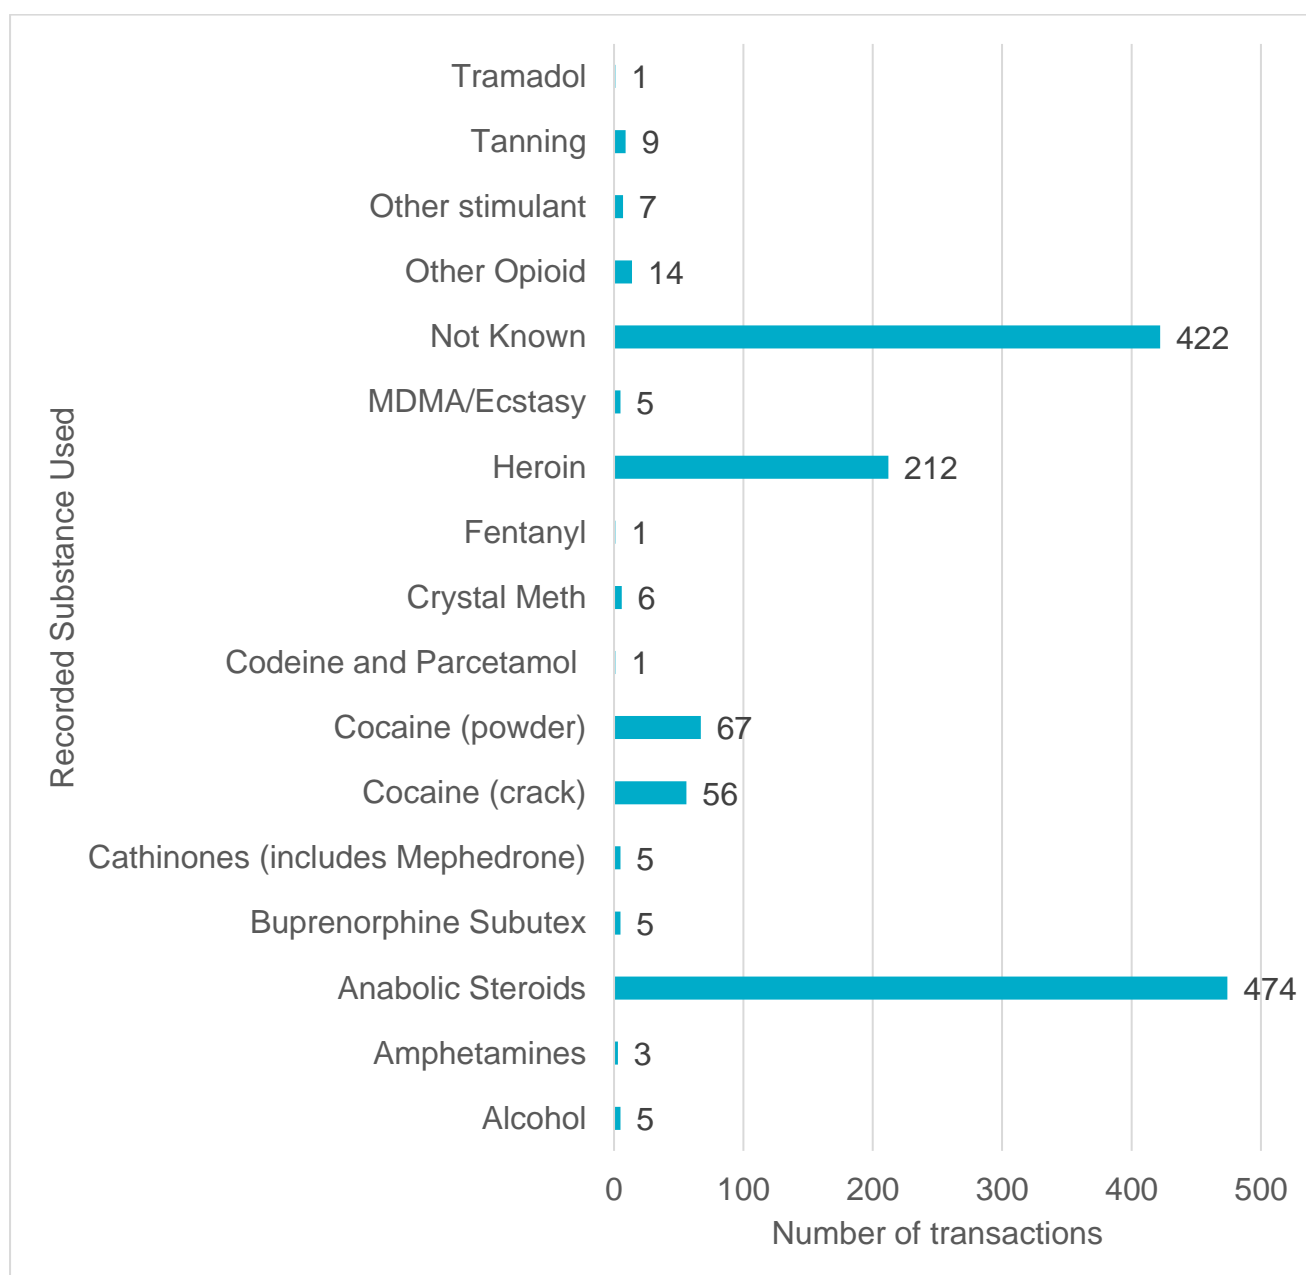

Figure 17 reflects that of the 1,054 transactions in this reporting period, 1293 reports of substance used were recorded across 17 substances. This includes those selecting 'unknown' category which was 422 (32.64%). This is an increase from the previous month (388). The largest recorded substance used was anabolic steroids (474), followed by heroin (212) and cocaine powder (67). This remains similar from previous quarters.

Section 5: South Eastern Health and Social Care Trust Area NSES Data

In the South Eastern Health and Social Care Trust Area (SEHSCT) within the reporting period there were:

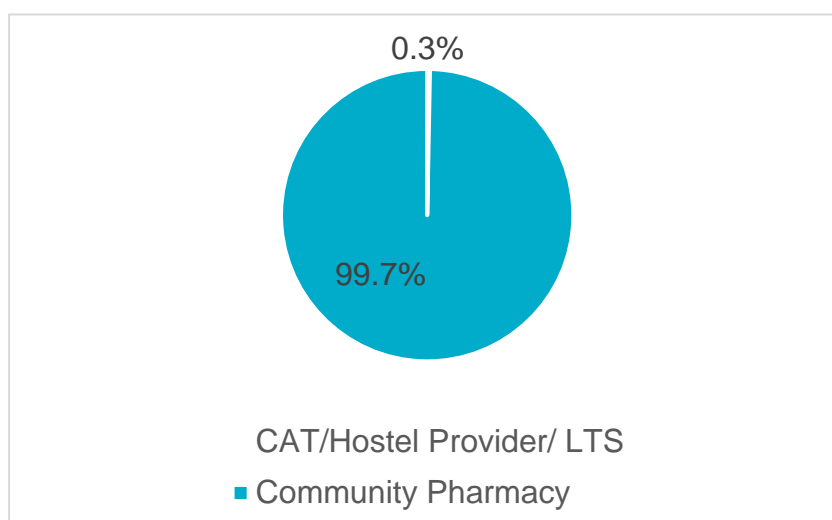

631 NSES transactions completed

432 unique clients using NSES

171 new clients registered for NSES

1 anonymous transaction completed

Figure 17: Number of NSES transactions per provider type in the reporting period in SEHSCT

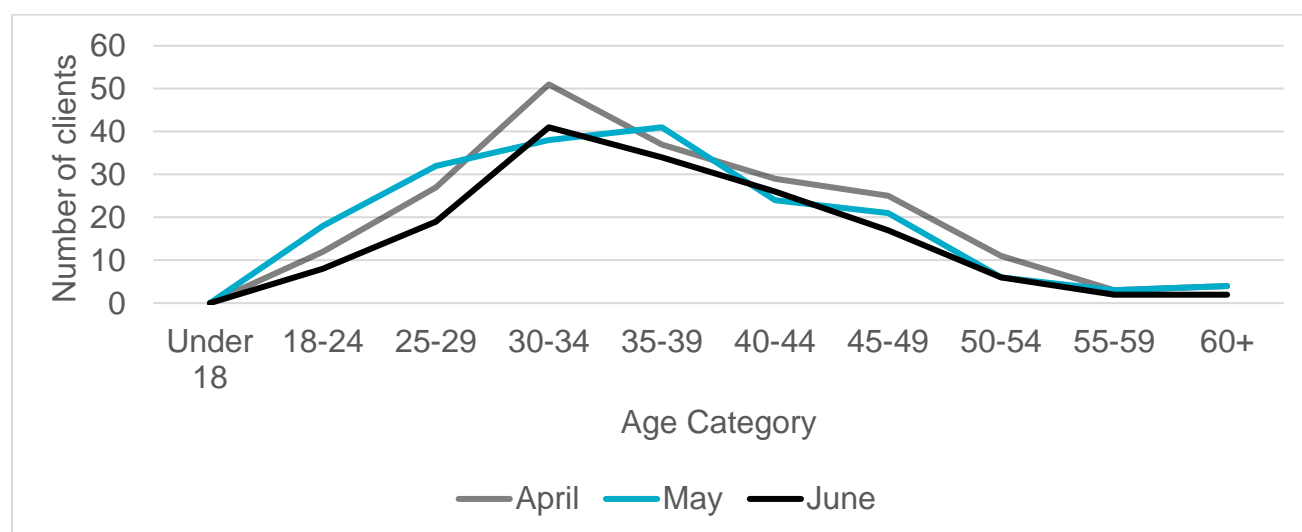

As shown in figure 17, the majority (99.7%) of transactions within SEHSCT were completed by community pharmacies.

NSES user profile

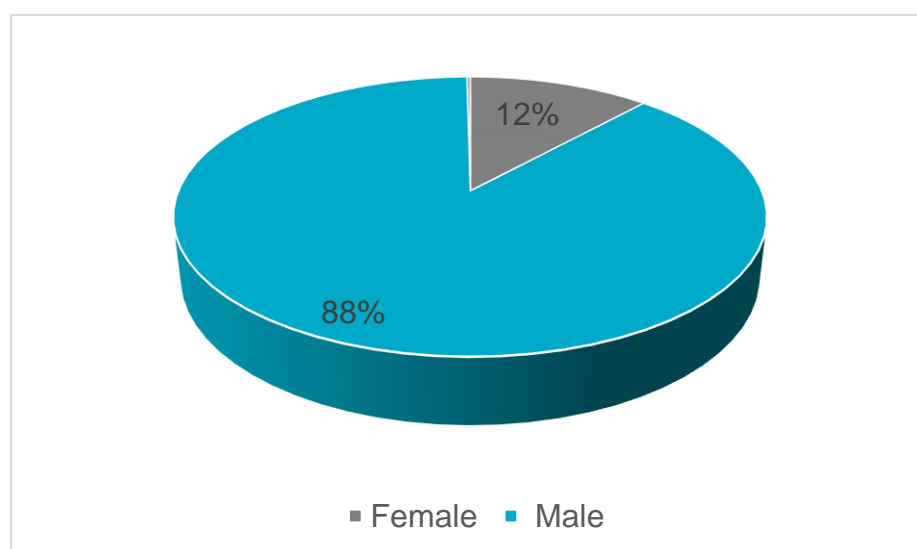

The age and gender profile of those who have completed a transaction within the reporting period is shown in Figures 18 and 19.

Figure 18: Current Age of Clients in SEHSCT registered in reporting period.

The most common overall age category of those using NSES are those between 30-34 years. In comparison, of the 171 new clients registered with NSES, the most common age category was 35-39 years.

Figure 19: Gender profile of users at registration in SEHSCT

Overall, the majority of clients were male (88%) compared to females (12%) using NSES. Of the 171 new clients registered with the service, (84%) were male and (16%) female. The number of females using and registering as new clients with needle exchange continues to increase as in the previous reporting year 01 April to 30 June 2023, 11% of new clients were female.

Figure 20 Recorded substance used by transaction in SEHSCT

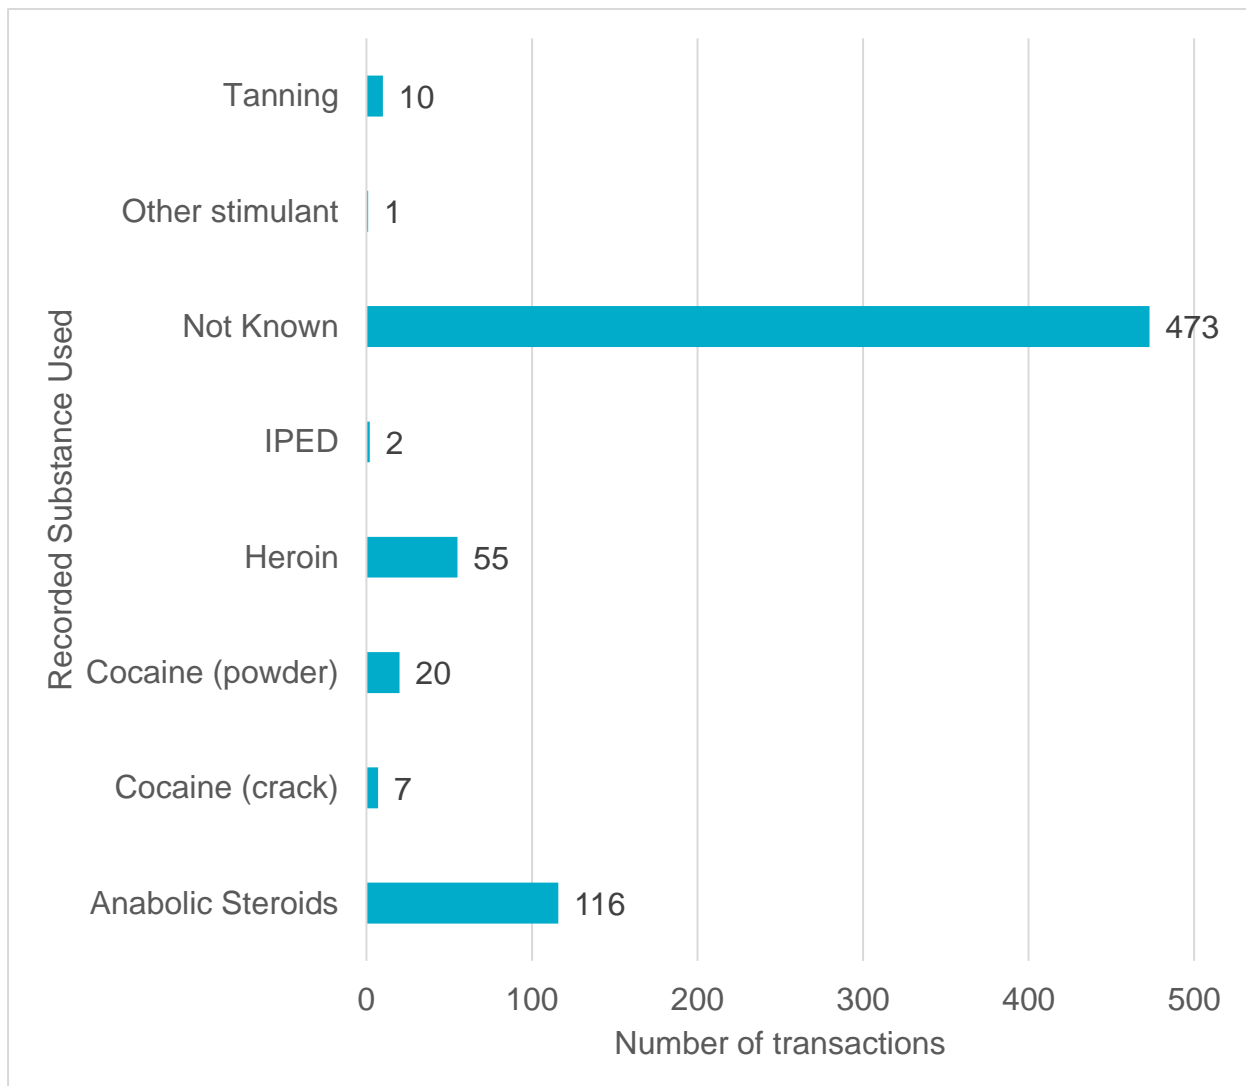

Figure 20 reflects that of the 318 transactions in this reporting period, 684 reports of substance used were recorded across 7 substances. This includes those selecting 'unknown' 473 (69.5%). The largest recorded substance used was anabolic steroids (116), followed by heroin (55) and cocaine powder (20).

Section 6: Southern Health and Social Care Trust Area NSES Data

In the Southern Health and Social Care Trust Area (SHSCT) within the reporting period there were:

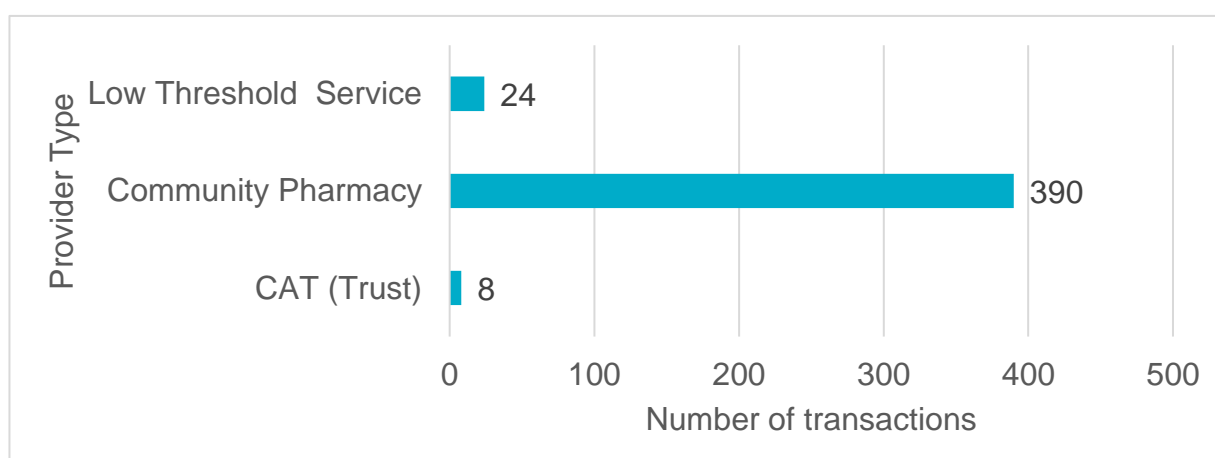

422 NSES transactions completed

253 unique clients using NSES

94 new clients registered for NSES

7 anonymous transactions completed

Figure 21: Number of NSES transactions per provider type in the reporting period in SHSCT

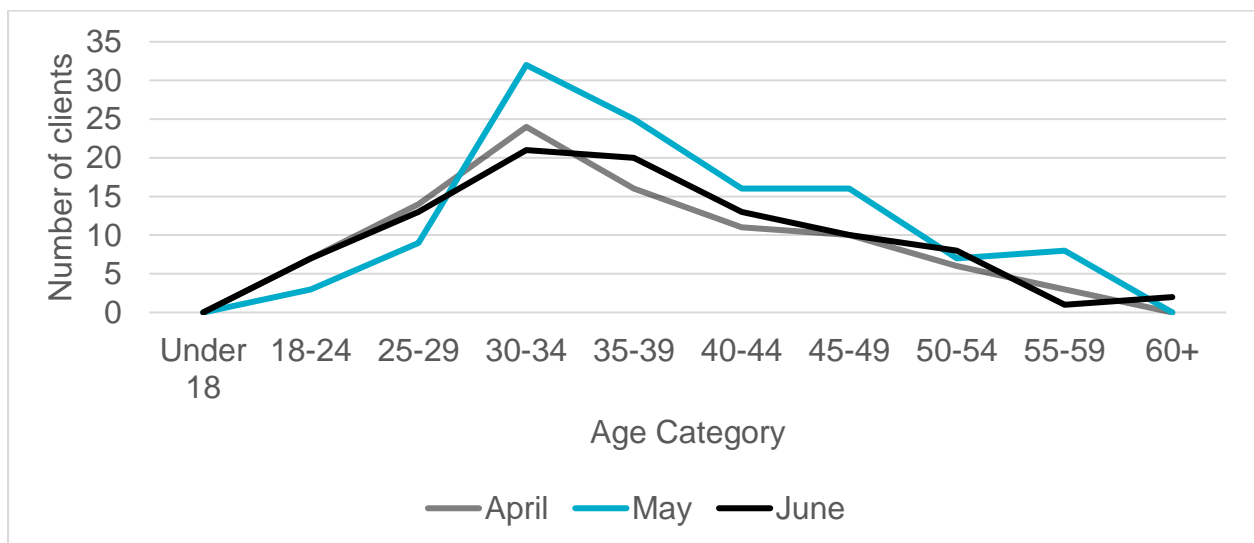

As in the previous quarter, the majority (92.4%) of transactions in SHSCT take place in the community pharmacy.

NSES user profile

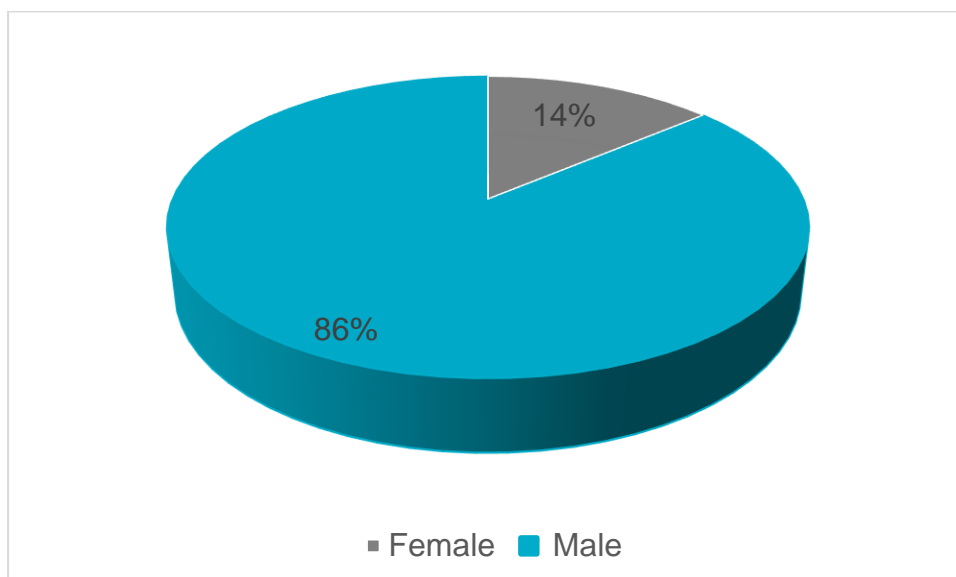

The age and gender profile of 94 users who have completed a transaction within the reporting period is shown in Figures 22 and 23.

Figure 22: Current Age of clients in SHSCT registered in reporting period

The most common age group of clients using NSES in re reporting period was age 30-34 years. Of the 94 new clients registered, the most common overall age group of clients in SHSCT was age 35-39.

Figure 23 Gender of clients at registration in SHSCT

The majority of clients using the service were male (84%) compared to females (16%). The ratio of new clients registering with the service during this reporting period remains the same as those accessing the service overall.

Figure 24: Recorded substance used by transaction in SHSCT

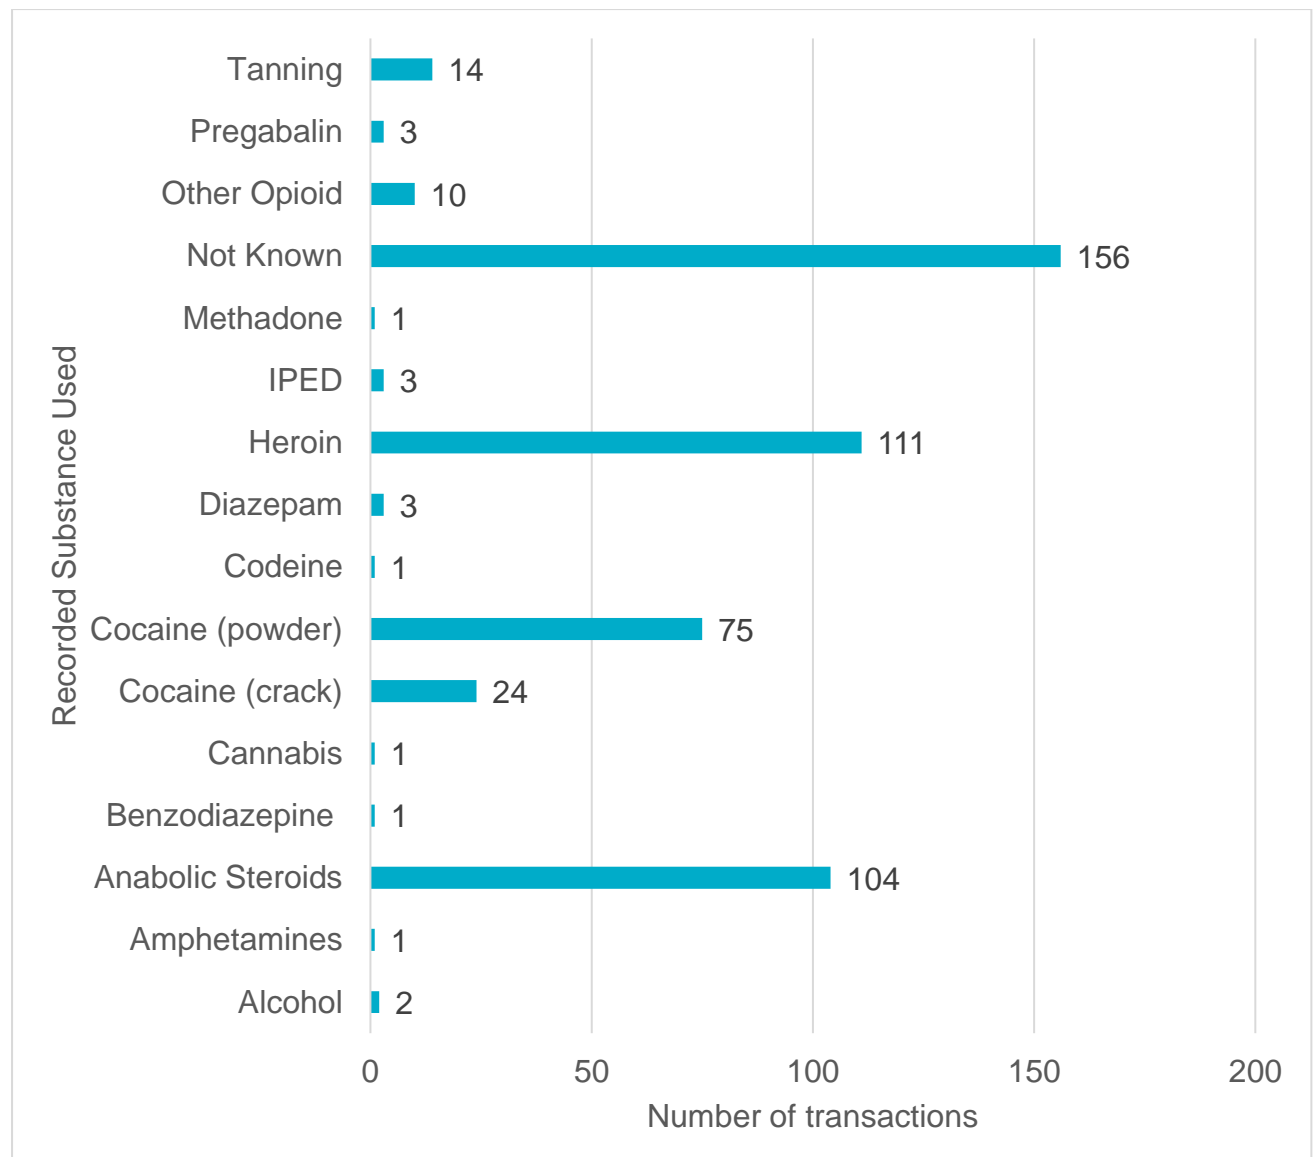

Figure 24 reflects that of the 174 transactions in this reporting period, 510 reports of substance used were recorded across 16 substances. This includes those selecting the 'unknown' category which was selected 156 times (29.9%).

The largest substance recorded was heroin (111) followed by anabolic steroids (104) and cocaine powder (75).

Section 7: Western Health and Social Care Trust Area NSES Data

In the Western Health and Social Care Trust Area (WHSCT) within the reporting period there were:

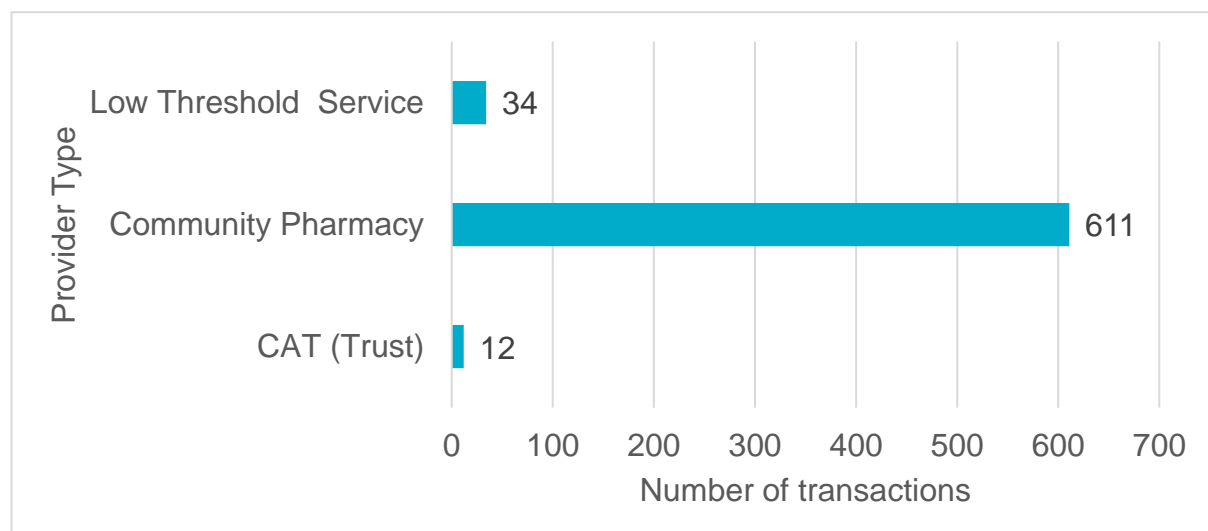

657 NSES transactions completed

488 unique clients using NSES

177 new clients registered for NSES

12 anonymous transactions completed

Figure 24: Number of NSES transactions per provider type in WHSCT

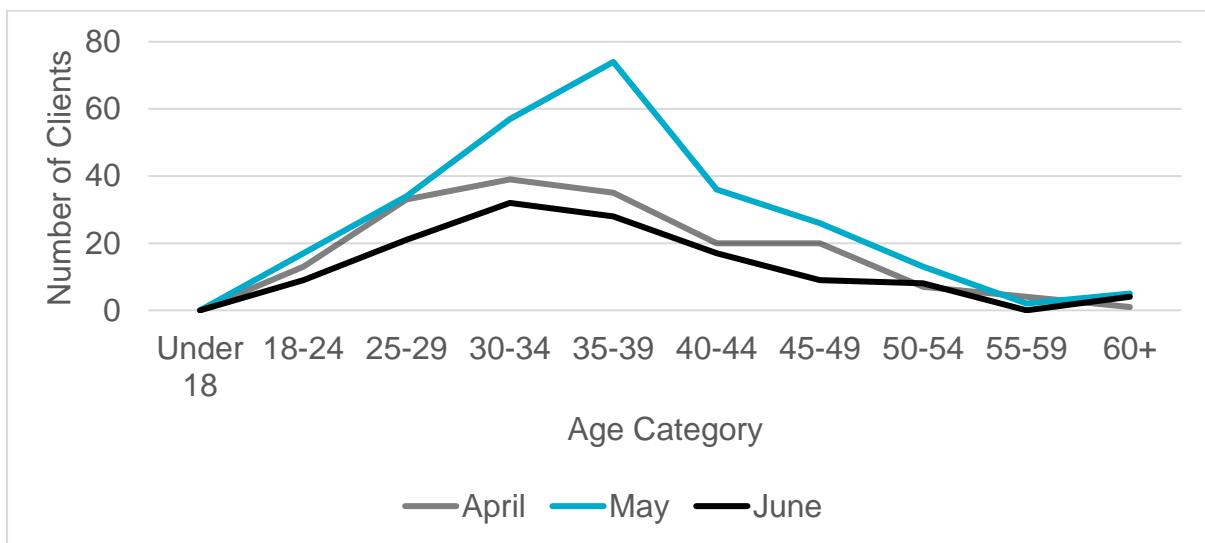

As shown in figure 24, the majority (611) of transactions within WHSCT were completed by community pharmacies.

NSES user profile

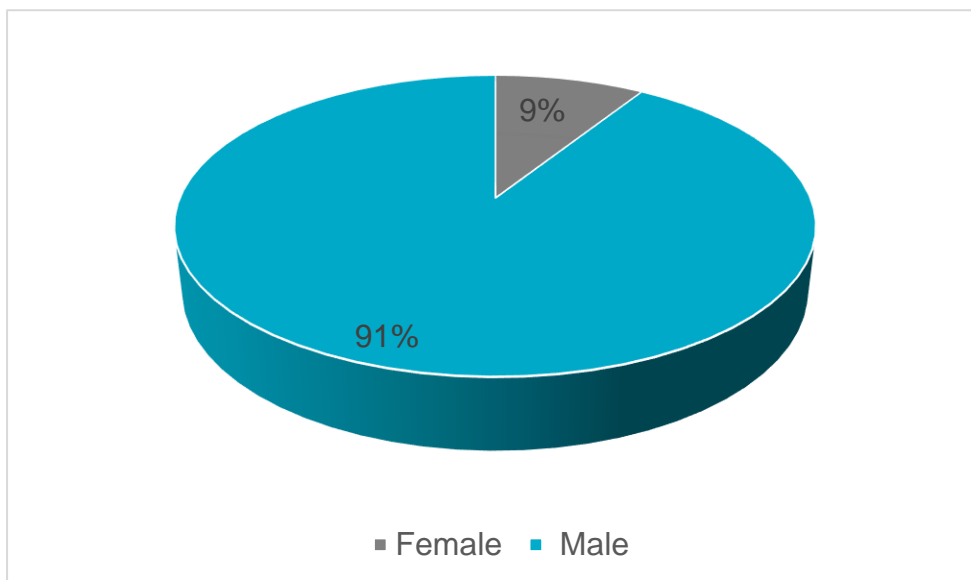

The age and gender profile of users who have completed a transaction within the reporting period is shown in Figures 25 and 26.

Figure 25: Current Age of Clients in WHSCT in reporting period

The most common age category in the WHSCT area was 35 – 39 years. This is reflective of the age category of those registered as new clients within the reporting period. As illustrated on the graph, there was an increase of clients using the service in May 2024, specifically within age category 35-39 years in May 2024.

Figure 26: Gender of clients

The majority of clients were male (91%). For those clients registering with NSES within the reporting period the majority were males (85%) compared to females (15%).

Figure 27: Recorded Substance Used by transaction in WHSCT area

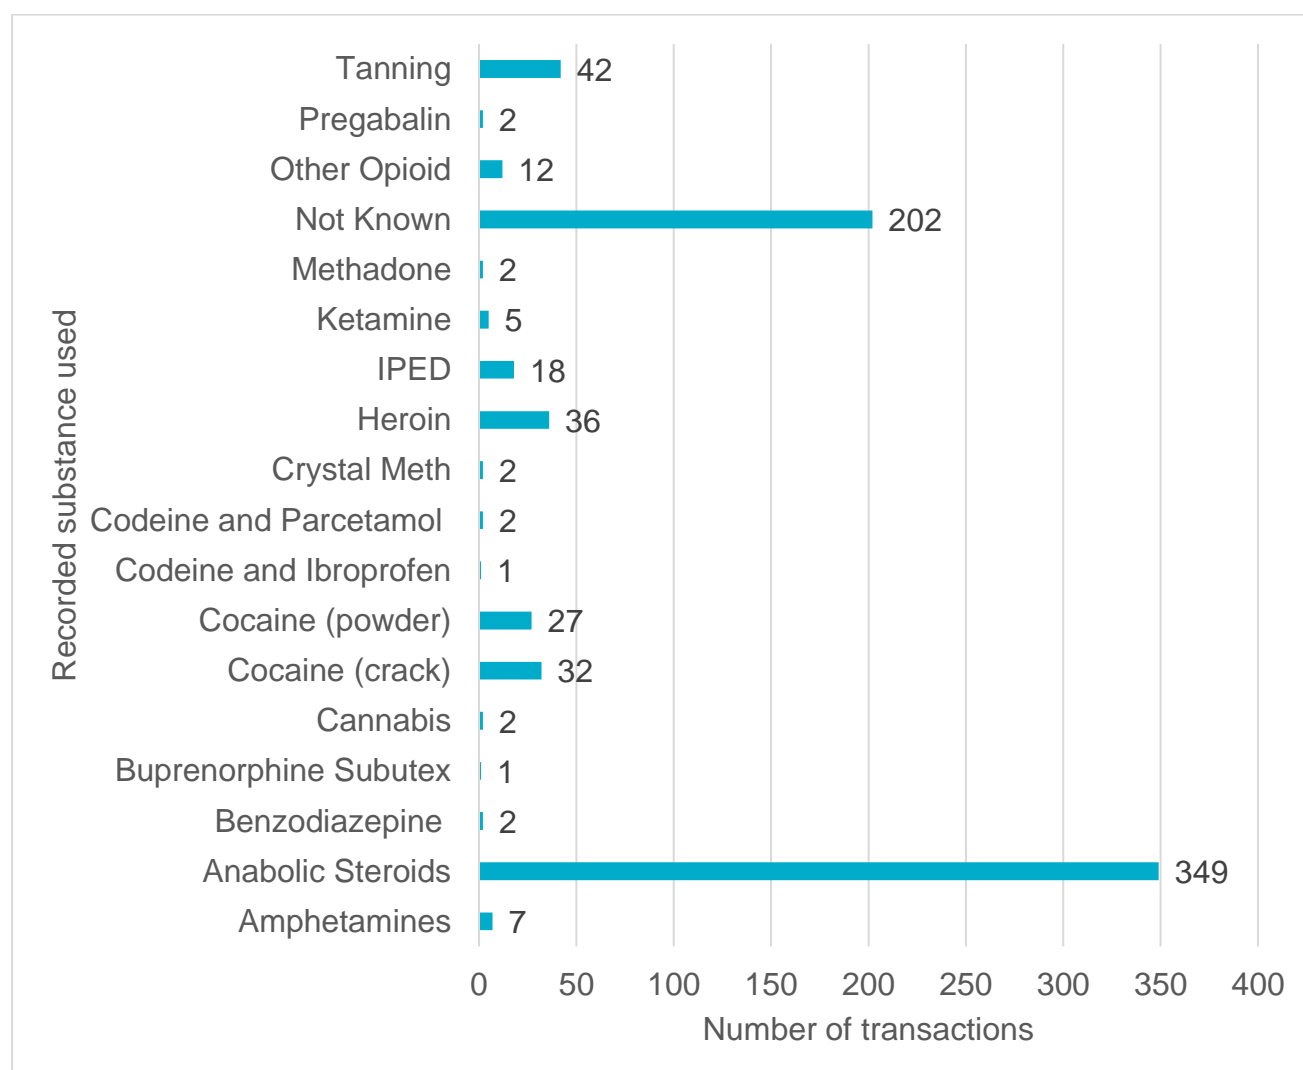

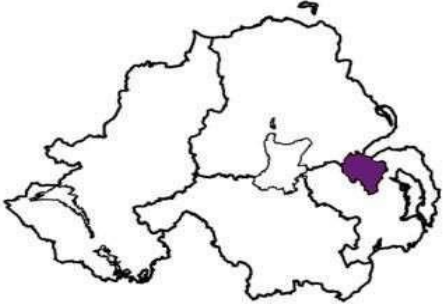

Figure 27 reflects that of the 481 transactions in this reporting period, 744 reports of substance used were recorded across 18 substances. This includes those selecting the 'unknown' category which accounted for 202 reports (27.6%).

The largest recorded substance usage in needle exchange was anabolic steroids (349) followed by tanning (42) and heroin (36).

Section 8: Summary of NSES activity per Trust Area

<p>Belfast HSC Trust</p>  <p>Number of unique clients: 1522</p> <p>Percentage male: 80%</p> <p>Most commonly reported Drugs</p> <ol style="list-style-type: none"> 1. Cocaine Powder 2. Heroin 3.
